

Poise. Purpose.

PRIM™

Striking a balance between what a luminaire should do and how it should feel, Prim holds sacred the idea that a space should have a continuous flow uninterrupted by intrusive light, and that occupants should benefit from comfortable, glare-free light whose source remains discreet. Prim's all-around seamless design and array of options maintains the continuity of a space, generating harmony across the entire lighting application.

This blend of human-centric illumination and design intentionality elevates Prim to be the peak of linear lighting solutions.

Seamless for Harmony

With a clean minimalist appeal for recessed and linear pendants, Prim blends a regressed seamless lens with architectural trims creating a pristine aesthetic.

Quiet by Design

With thoughtful, purposeful intent, the components of a traditional downlight have been designed to minimize top-down flash and high-angle glare, providing a soft, even illumination.

Preserve the Flow

A choice between ribbed or smooth trim options and a host of colors. That, plus a choice of square or sculpted endcaps simplifies keeping the visual flow consistent throughout the space.

Fast Link

A hassle-free, patent-pending electromechanical union with integrated electrical connection combines both operations with one quick, secure link.

Max Latitude

Install-friendly mounting bridges adjust $\pm 12"$ to easily work around obstructions, delivering substantial time savings and flexibility.

Elevate Your Control

Available with integral drives including emergency option for simple, control solutions. For projects that require maximum controllability, Modulus™ technology is available.
