Juno Recessed Lighting

Advanced illumination for the discerning homeowner

Welcome to the world of Juno Recessed Lighting. A brilliant world where lighting is effective and efficient ... blending seamlessly with every décor ... perfectly illuminating every room of the house. Juno offers the largest selection of high-quality recessed fixtures, incorporating industry leading performance, features and efficiency. Standard or sloped ceilings; ambient, task or accent lighting; niches or open spaces; Juno has a solution for every conceivable application.

Juno recessed fixtures are the favorite of contractors, architects, and lighting designers because they offer feature-rich installation, integrate quietly into ceilings, and present artwork, textures and architectural features at their dramatic best. They set the mood, expand space, and create stunning effects ... all the while allowing you to navigate easily throughout the interior of your home.

So whether you want your lighting to make a bold statement, provide practical illumination, or both, you need to look no further than Juno's superb line of recessed lighting products.

The best and the brightest

Every Juno® recessed fixture is designed and engineered to exacting quality standards, employing only the finest materials and manufacturing processes. A full range of trims, optics, and light sources ensures that you will be able to create the exact lighting effect you desire with the economy and efficiency you demand.

In addition to its exceptional recessed fixtures, Juno offers an extensive range of track systems, decorative pendants, and linear lighting solutions. Other complementary brands for residential lighting include

Lithonia Lighting® and Aculux®. By taking advantage of this diverse fixture collection, you can employ layers of light to create any mood or suit any illumination requirement throughout your home.

Since 1976, Juno has been providing the lighting industry with innovative products and unsurpassed service and support. When you choose Juno fixtures for your home, rest assured you are choosing the best and brightest.

Housing Offering

Juno Downlights are a complete line of LED, low-voltage, and incandescent recessed luminaires for both standard and sloped ceilings. They provide high-quality illumination for all your applications, including general, task, accent, wall-wash, and step lighting. New construction and remodel housings are available in 1", 2", 3", 4", 5", and 6" sizes for insulated and non-insulated ceilings.

Air-Loc®

Juno IC housings are Air-Loc rated and designed to minimize air leak paths. Air-Loc rated housings are tested in accordance with ASTM E283 and certified by an independent laboratory to be in compliance with the minimum air-leakage standards as set in the International Energy Conservation Code, as well as several state energy codes, including Washington State. Significant cost savings are realized as summarized in the chart below:

	Standard IC	Juno Air-Loc IC	Juno Air-Loc IC w/Air-Loc Trim or Gasket
Areas of Leak Path	2.8 sq. inches	2.46 sq. inches	< .1 sq. inch
Air Leakage	5 cu. ft./min. 2.6 million cu. ft./year	2.6 cu. ft./min. 1.4 million cu. ft./year	0
Energy Loss	.86 million BTUs/year	.45 million BTUs/year	0
Annual Energy Savings (VS. STANDARD IC)		\$3.53 per fixture	\$7.34 per fixture

* Based on 10 cents per KWH

Real Nail 3® Bar Hanger

The Juno originated, Real Nail bar hanger has set the industry standard for ease of installation for over 40 years. This 3rd generation design features an improved range of benefits:

- Proprietary bugle-head, ring shank nail for positive installation and simple claw hammer removal when repositioning housings
- Integral T-bar notch for secure installation in suspended ceilings
- Patented break-away bars for tight joist spacings
- Curved foot facilitates alignment with joist bottom

Regulatory Listings & Standards - Catalog Icons

ENERGY STAR® Qualified products

Juno's sealed recessed IC housings meet IECC Air-Loc® Code requirements per ASTM E283 for minimum leakage with IC housing

Juno Downlights meet the high efficacy requirements of California Title 24 (JA8-2016)

UL and C-UL Listed for Wet Location when used with outdoor rated lamps or when used with lensed trims

Many Juno Step Lights are ADA Compliant

WarmDim® technology brings the warmth and atmosphere of incandescent dimming to LED.

LED fixtures are RoHS Compliant

Aesthetically Superior Trims

Juno downlight trim offering is unparalleled in the industry; choose from traditional 4", 5" and 6" baffle, cone, wall wash, and lensed trims in an array of finishes and styles.

Clear Cone

Specular finish produces a neutral appearance with exceptionally low brightness.

Haze Cone

Uniform satin finish has a soft luminous appearance and hides dust and fingerprints. Blends with white ceilings and coordinates well with cooler interior finishes, light hardwoods and metallic accents such as satin nickel and stainless steel.

Wheat Haze Cone

Offers a rich trim appearance, and adds subtle warmth to an interior. Coordinates well with warmer tone interior finishes, hardwoods and metallic accents such as satin brass and oil-rubbed bronze.

Gold Cone

Specular finish with a pale gold tint slightly warms lamp color temperature and provides decorative aperture appearance.

Black Cone

Specular black finish produces lowest possible brightness and maximum source concealment.

Black Baffle

Sharply defined concentric ridges reduce trim brightness and create a pleasing architectural appearance.

White Baffle

Brighter appearance when illuminated, but blends with white ceiling when off.

Hyperbolic Trims – A Breakthrough in the Art and Science of LED Recessed Lighting

In 2012 we pioneered the hyperbolic trim with the introduction of Indy™-brand hyperbolic trims for use in commercial interiors. Never before had the industry been able to enjoy high luminaire efficiencies and extremely low aperture brightness! Hyperbolic trims are available for Juno-brand 4-, 5- and 6-inch 600, 900 and 1400 lumen residential/light commercial IC and TC rated LED downlights. Easy to install – they are as simple as installing a standard trim.

Juno® Hyperbolic Trims compared to standard cone trims

Juno hyperbolic trims provide a Silent Ceiling™ effect.

Standard cone trims in the ceiling.

Energy efficiency ... it just makes \$ense

Today, we live in an environment where the specter of global warming threatens our eco-system and our very way of life. That's why Juno recessed fixtures are designed first-and-foremost for optimal energy efficiency. Efficient lighting requires less electrical power, which in turn, contributes to a cleaner, more sustainable habitat for all living things.

Juno leads the way in efficiency with ENERGY STAR®

Qualified LED fixtures that consume as little as 15% of the energy of conventional lighting.

Even our halogen units provide substantial energy savings compared to standard incandescent lamps. Energy efficiency ... it just makes sense. Our most efficient fixtures can help reduce your electric bill thanks to energy-saving light sources and unique construction features such as our Air-loc® housings. And when you install energy efficient lighting products, you may find that you qualify for valuable rebates from your local utility company.

Saving energy. It makes sense for our planet ... and your pocketbook.

See pages 31-93, 125-131, 137-147, 151-168 for the latest energy efficient LED fixtures.

Juno leads the way in efficiency with ENERGY STAR® Qualified LED fixtures that consume as little as 15% of the energy of conventional lighting.

Lighting your home like a pro

Light is an invisible element that has a tremendous influence on your quality of life. Nowhere is this influence greater than in the interior of your home. How you illuminate it has everything to do with the look, feel and quality of your environment. Lighting professionals understand this and deftly use lighting to create mood and ambiance in addition to general illumination. For the homeowner, knowledge of a few lighting basics can go a long way toward achieving professional results.

Know your space

Before selecting your lighting, you need a clear idea about what you want the lighting to do. Think about how you use each room, its architectural features, and the furniture layout. Consider the carpeting, fabrics, and colors; paintings, collectibles, and other forms of art. There are lighting techniques tailored to every situation, and the first step is to understand your needs.

What you can control

There are three major aspects of lighting that you can control. First, there's the amount of light produced by your fixtures, measured in lumen output and footcandles. Next is the distribution of light, i.e. where the light is going. Finally, there's the quality of light, which refers to whether the light is warm, cool, or somewhere in between. By taking control of these elements, you can create the ideal lighting scheme or every interior space.

Perfect Marriage of Light and Sound

The recessed Lithonia Lighting® 6SL Wireless LED Speaker Downlight module provides an easy and efficient way to light up a room and enjoy music for the entire family. It's perfect to retrofit into existing 6" downlight cans or new construction and remodel applications. Wirelessly stream audio from your mobile device via Bluetooth®. Easily pair wirelessly up to 8 units for a more enhanced and balanced sound experience.

The Bluetooth® word mark and logos are registered trademarks owned by Bluetooth SIG, Inc. and any use of such marks by Acuity Brands Lighting is under license.

Lighting in layers

Layering is the concept of incorporating different types of lighting into a specific space to satisfy multiple illumination requirements. For instance, a dining room can have linear fixtures in coves to expand space or establish a mood, or fixtures can be incorporated into casework to add sparkle to glassware. Recessed downlights positioned above tables and serving areas can be dimmed for a romantic dinner or used at full intensity when doing homework or paying the bills. Chandeliers, pendants, and sconces can provide general illumination or produce a lateral lighting element that fills in shadows on walls and on people's faces.

With multiple lighting layers, you will always have just the right light for your specific purpose. And by balancing all the layers at your disposal, you can create just the right atmosphere for any occasion.

Kitchen

Downlighting (General)

Fills the room with light, allowing you to move through your space. Downlights can also be centered over islands and leading edges of countertops for task illumination.

Undercabinet (Task)

Illuminate countertops, backsplashes and other work surfaces with undercabinet fixtures. Cool, bright-white light is ideal for cooking chores such as cutting, slicing, and dicing. Modular, linear fixtures are ideal for long surface lengths, while “solo” fixtures put light exactly where needed.

Accent/Mood Lighting

Highlight decorative cabinet detail, artwork or architectural features with adjustable downlights or mini-downlights. Set the mood by lighting cabinet interiors with linear lighting or mini-downlights, and the space between cabinets and ceiling with linear lighting. Lighting controls can provide selective dimming to create the perfect effect.

Pendants/Decorative

Add a decorative touch and general illumination over islands and tabletops. Translucent pendant shades also provide a lateral lighting element that fills shadows and contributes to the overall mood.

Tip

The complete line of Juno fixtures are ideal for task, cove, up-lighting and undercabinet lighting. All offer a comprehensive selection of finishes, lengths and lamp options, including the latest energy efficient LED technology.

For comprehensive lighting techniques, see pages 22-29.

Dining Room

Downlighting (General)

Provide general illumination with downlighting; position fixtures in the general navigating area to fill the room with light. Light vertical surfaces such as walls, draperies, or screens with recessed adjustables or wall washers to add visual interest and showcase artwork or architectural details.

Accent/Mood Lighting

Supplement the light from pendants and chandeliers while enhancing the richness of natural woods and highlighting centerpieces and place settings. Lighting wall-mounted artwork with recessed adjustable fixtures also adds to the dramatic appeal of the room. Incorporate linear lighting in coves, mini-downlights or solo undercabinet lighting into china cabinets to produce sparkle and spaciousness.

Pendants/Decorative

Make a bold statement with decorative pendants that set the tone for your dining room. Position pendants above tables or serving areas, and arrange them in clusters for a creative splash. Pendants with translucent shades give off a soft, warm glow that also provides a lateral lighting component to fill distracting shadows.

Tip

To create an inviting environment for your guests, consider exclusive Juno WarmDim® LED fixtures along with Aculux® precision luminaires to highlight place settings and create sparkle.

For comprehensive lighting techniques, see pages 22-29.

Hallway & Step Lights

Downlighting (General)

Provide general and navigational lighting with recessed downlights. Combine fixture placement with the appropriate lamp output to create uniform lighting or pools of light that add visual interest and make the hallway appear larger.

Step Lights, Night Lights

Illuminate hallways, pathways, or stairs to provide safe navigation and add a sense of visual direction and destination.

Accent

Highlight artwork with adjustable accent lighting. Create a dramatic focal point with brightly lit objects at the end of hallways. Use mini recessed fixtures to illuminate niches and nooks.

Grazing

Introduces shadow and contrast to lend a dimensional appearance to brick, stone, stucco or textured material.

Wall Washing

Uniform illumination on walls makes hallways feel wider and brighter. Recessed wall wash fixtures provide ceiling to floor lighting, eliminating scallop patterns that can cause a cave-like effect.

Tip

Evenly spaced hallway downlights and step lights provide a sense of visual direction and destination.

For comprehensive lighting techniques, see pages 22-29.

Bathroom

Downlighting (General)

For a large bathroom, use multiple downlight fixtures spaced throughout the room for general lighting. Downlights mounted over the sink or vanity brighten horizontal surfaces and provide illumination for grooming or applying makeup. Soft, flat light from wall-mounted fixtures fills-in facial shadows when using mirrors.

Accent

Selectively illuminating artwork and architectural elements can make the bathroom environment more interesting and intimate.

Shower Light

Lensed downlight fixtures approved for wet locations may be mounted in showers and above baths and whirlpools.

Tip

Proper downlight placement combined with soft, flat light from wall-mounted fixtures fills in facial shadows when using mirrors.

For comprehensive lighting techniques, see pages 22-29.

Living Room

Downlighting (General)

Provide illumination for the most dramatic room of the home. In addition to general lighting, downlights can be used to wash the walls with light, creating a brighter, more spacious environment. And downlights can be positioned to graze the surfaces of brick, stone, or stucco to accentuate textures and add contrast. Juno Slope and Super-Slope LED housings cover pitch ranges of 2/12 to 12/12 (9° to 45°) and deliver up to 1400 high-performance lumens with efficiency and style.

Accent, Cove

Emphasizing focal points adds visual interest. Use narrow-beam downlights with higher light-output and adjustable trim to dramatize artwork, end tables and collectibles. Establish a mood with downlighting or linear lighting by illuminating architectural features such as columns, niches, and coves. Add miniature fixtures to built-in casework to add sparkle and further expand interior spaces.

Tip

Downlights can provide general lighting or create dramatic effects whether ceilings are standard or sloped.

For comprehensive lighting techniques, see pages 22-29.

Precision Lighting

Aculux® ... the ultimate expression of recessed lighting perfection

The Aculux line of precision recessed luminaires offers elegance, style, and performance. These superb fixtures are designed to provide highly efficient illumination while producing dramatic, space-enhancing lighting effects.

Featuring precision gearing and adjustments, Aculux can put light precisely where you want it, whether you are highlighting a painting, sculpture, or tabletop ... or illuminating an entire room. And Aculux incorporates a unique adjustable platform that permits perfect fixture-to-fixture alignment. No other downlights can match the degree of precision adjustments offered by Aculux.

Aculux apertures may be either round or square and are available in sizes from 2" to 4" all the way down to stylish pinholes. Trim options range from nearly invisible tapered flanges to flush-mount designs that literally disappear into the ceiling. A spectacular collection of reflectors includes colors and finishes to complement any décor. Whether your look is contemporary or traditional, Aculux delivers stunning results quite distinct from standard recessed fixtures.

Aculux luminaires are designed for a wide range of light sources including ultra-efficient LEDs that offer unprecedented energy savings and service life. These supremely versatile fixtures excel at general, task, accent and wall wash lighting for today's leading homes and are an ideal complement to the comprehensive Juno recessed lighting collection.

Tip

Aculux adjustable luminaires complement Juno downlights adding dramatic visual appeal to any room. To learn more about precision Aculux fixtures, visit www.acuitybrands.com/aculux

Lighting Techniques & Planning Tips

General Lighting

General lighting sets the basic ambient illumination level of a space. It is important for circulation and functionality.

Uniform Downlighting

Uniform illumination provides a layer of ambient light typically used to provide general lighting on horizontal surfaces. It is important to note that, while useful, uniform illumination typically has the least visual impact on a space. Uniform illumination can be accomplished using the following techniques.

8' - 10' Ceilings

Use wide distribution LED or frosted PAR lamp downlights with a baffle or a cone, spaced approximately the same distance on center as the ceiling height. Use Juno 600 lumen LED downlights for the ultimate energy efficient option.

10' and Higher Ceilings

Medium and narrow spread LEDs or PAR lamps in downlights using a baffle or a cone provide more concentrated light beams and are effective for uniform illumination from higher ceilings. For higher ceilings, narrower beam spreads are required. Use Juno 900 lumen LED downlights with a medium or narrow optic for the ultimate energy efficient option.

Non-Uniform Downlighting

Non-uniform downlighting provides the appearance of pools of light and can provide a more interesting visual appearance. Non-uniform illumination is generally accomplished with narrow PAR or MR16 lamps, or Juno LED downlights with the narrow optic spaced far enough apart so their beams do not overlap. Spacing is a function of the chosen lamp's beam spread and desired effect.

Task Lighting - Ceiling Techniques

Supplemental illumination is essential for performing tasks accurately, efficiently, and safely.

Task Lighting

Placement of recessed downlights to facilitate tasks is critical. For counter or work surface tasks, recessed fixtures should be placed between the cabinet face and the front edge of the counter. This position avoids casting of shadows and minimizes veiling reflections. Medium beam lamps will light inside of cabinets and also highlight cabinet detail, providing light on the vertical surface.

Correct

Incorrect

When lighting paper-handling tasks, adjustable downlights should be placed on each side of the task to minimize glare and veiling reflections.

Correct

Incorrect

When lighting tasks in front of people, such as on a tabletop, it is important to locate downlights in front of the person so as not to cast unnatural/unpleasant shadows. For grooming at a vanity or mirror, provide fill lighting from a diffuse source, such as a wall sconce. Accent hardware and countertops with recessed narrow beams.

Correct

Incorrect

Application Tips

Downlight fixtures are assigned a value called spacing criteria (SC). The SC is typically a number from .5 to 1.5 and can be found on Juno product specification sheets. It indicates how close together fixtures need to be spaced in relation to the mounting height from the ceiling to the workplane or floor to achieve overlapping beams for uniform illumination. For example, if the SC of a fixture is equal to 1, you would space the fixtures a maximum of 1x mounting height for even illumination. (The mounting height can be the floor or table top 2' - 6' above the floor.) For higher levels of illumination, fixtures can be spaced closer together.

Task Lighting - Undercabinet and Indirect Linear Techniques

Juno® Undercabinet luminaires place bright lighting on work surfaces by utilizing a light source located close to the task. This placement is ideal since general lighting is often blocked by a person's shadow or a shadow from upper cabinets. Undercabinet lighting provides the increased light levels required to accurately, quickly, and safely perform tasks.

Recommended Illuminance Levels

Twenty to fifty footcandles are generally adequate to perform kitchen undercabinet tasks such as food preparation or paying bills. More detailed tasks such as sewing or craftwork require 50-150 footcandles. Tasks that are very small, have intricate detail, or involve very dark surfaces may require even higher illumination levels. With the advent of dimmable halogen, xenon and LED undercabinet lighting, what was once strictly task lighting is now also used as accent lighting for granite, hardware, tile, backsplashes, and other fine finishes to provide an element of sparkle and vitality.

Accent Lighting

Cabinets and shelves create dark cavities that can detract from the aesthetics of a room. By illuminating these cavities, Juno Undercabinet fixtures create visual interest and a sense of spaciousness and, in addition, can highlight objects of interest. Juno Mini Downlights, Juno 2" Downlights and Adjustables, Solo-Task and Trac 12™ linear fixtures are ideal for accent lighting applications.

Recommended Illuminance Levels:

Accent lighting usually requires 20 footcandles or less.

Indirect Cove Lighting

Indirect lighting above cabinets or in architectural coves can increase the sense of spaciousness and add drama and pleasing warmth to an interior. Juno Trac 12™ or Juno FlexConnect™ linear lighting is ideal for cove lighting applications.

Recommended Illuminance Levels:

Cove lighting usually requires 20 footcandles or less.

Special Design Considerations

Dark Interior Finishes

The amount of perceived light from undercabinet, accent, and cove lighting will vary greatly depending on the reflectance of surrounding surfaces. A dark countertop and backsplash will absorb light from undercabinet fixtures and diminish its apparent brightness. Likewise, indirectly illuminating a dark wood-paneled ceiling from an architectural cove will be much less dramatic than illuminating a white ceiling. Providing increased levels of illumination can partially offset light absorption by dark surfaces.

High Ambient Light Levels

The apparent brightness of a lighted countertop, cabinet interior, or cove will also vary depending on the amount of general room illumination. If the general ambient lighting is 30 footcandles, then a cabinet interior illuminated to only 20 footcandles will not appear illuminated. Conversely, in a darkened room, 20 footcandles will appear brilliant. A minimum 3:1 ratio between the focus area and background is recommended to have visual impact. A 5:1 ratio makes the focus area appear twice as bright.

Age

As age increases, so does our need for light. A typical 65-year-old needs five times more light than a teenager to experience equal visual acuity.

Shiny Work Surfaces

For high-gloss countertops and backsplashes, place the fixture at the front edge of the cabinet to minimize glare reflecting into the eyes of someone working at the counter. Keep in mind that shiny dark surfaces act like a mirror and will reflect any source of light that is placed above them. How the reflected image of one fixture appears vs. another is subjective.

Cove Lighting

Undercabinet Lighting

Accent Lighting

Accent lighting creates high contrast on objects of interest such as sculptures, paintings, collectibles and architectural details. For noticeable visual impact, accent lighting should be at least three times as bright as the surrounding area. More dramatic accent lighting requires contrast ratios of 5:1 or greater. Smaller objects such as figurines or gem stones will benefit from even higher ratios of up to 20:1.

Accent lighting of flat artwork

Flat art is ideally illuminated by a light source striking its surface at a 30° angle. This eliminates reflected glare from vertical glass and prevents casting a shadow of the viewer onto the artwork. To determine the correct distance from wall to fixture you can use the formula listed below or the quick reference chart on the right.

Formula to calculate luminaire distance from the wall for a 30° aiming angle where H = Distance from the ceiling to the aiming point and D = Distance from the wall to the center of the luminaire. (The aiming point is generally located at 1/3 down from the top of the picture or object.)

$$D = H \times .6$$

Example: $D = 4.5' \times .6 = 2.7'$ or approximately 2'-8"

If the formula places the fixture on a beam or mechanical obstruction, move the fixture closer, **not** farther back.

Accent lighting of three dimensional objects

"Key and fill" is an effective technique for accentuating the three-dimensional character of an object. This technique uses key and fill lighting from two sides of the object. Key lighting is a "hard" accent light used to create shadows and highlight an object's form and texture. Fill lighting is a softer light directed from the opposite side of the object to soften the shadows, making the object appear more natural. Other techniques can also be applied to further accentuate unique features, such as silhouetting an object from behind with a wall wash.

BACK

PLAN VIEW

Accent Lighting Fixture/Lamp Choices

12-volt MR16 Adjustables are the fixture of choice for accent lighting due to their small aperture; intense beam spreads; and available range of light control and color correction accessories – see pages 98-100.

PAR36 adjustables are ideal for longer throw distances up to 30', where tightly controlled pinspots of light are required. They are well suited for illuminating larger objects or areas such as fireplaces, coffee tables, large art or murals, potted trees, etc – see the TC46 housing on page 101.

4" Internally Adjustable LED These fixtures offer internal adjustability of up to 35° vertical and 360° rotation so that light can be directed where needed – see pages 43-45.

Mini and 2" LED Ideal for niches, bookcases, soffits, cabinetry and more, these luminaires open-up a multitude of task and accent lighting possibilities – see pages 34-41.

Wall Lighting

The illumination of vertical surfaces can impact the perception of a space more than any other type of lighting. Light reflecting off of walls creates a bright, spacious feel and adds visual interest.

Wall Washing

Wall washing provides even, diffuse illumination of vertical surfaces such as walls, large paintings, wall hangings, bookcases and shelving, cabinet fronts (glass not recommended), or stairwells. The desired effect is that of an even blanket or "wash" of light without hot spots or scallops. The diffuse nature of wall wash illumination has the effect of flattening out textured surfaces.

Wall wash luminaires are usually spaced equal to the set back distance from the wall. Closer spacing leads to higher light levels with better uniformity. There are three fixture types that are most commonly used to achieve uniform wall washing:

Scoop Wall Wash Trims

These are the most economical type of wall washer. The combination of a directional reflector and a light "scoop" direct light toward the wall. Most residential scoop wall washers utilize A-lamps or LEDs. Scoop wall wash trims are generally spaced 20" - 30" from the wall and 20" - 30" apart.

Lensed PAR/MR Wall Washers (Aculux® only)

These utilize an internal kicker reflector and a special spread lens to more efficiently put light on the wall. Lensed wall washers produce a soft, slightly vertical pattern that can be used singularly or in multiples. MR16 lensed wall washers are generally spaced 12" - 18" from the wall and 12" - 18" apart. PAR lamp, lensed wall washers are generally spaced 2' from the wall and 2' apart. Consult specification sheets for specific information on spacing and light levels.

LED Wall Wash

LED Wall Wash reflectors are truly innovative. By leveraging the properties of the directional LED light source, the unique reflector system has been optimized to direct the light with such precision as to essentially "paint" the light on the wall horizontally from floor to ceiling with unsurpassed uniformity. This LED wall wash system eliminates scallops and projects light close to the ceiling line. These luminaires are almost always used in multiples, and are generally spaced 24"-36" from the wall and 24"-36" apart.

Grazing

By placing downlights 6" - 12" on center from a wall, a grazing effect can be achieved on textured surfaces such as brick, stone or stucco. PAR or narrow flood LEDs are a good source to use for grazing. (**Note:** Grazing on smooth surfaces is not recommended as it will magnify any surface imperfections).

Light Scallops

Light scallops can be an intentional or unintentional effect of a downlighting plan. A row of downlights close to the wall will cause light scallops, which can add visual interest to a space. The more diffuse the light source and trim, the softer the scallop. For example an R/BR-lamp mounted in a white baffle trim will barely create any scallop; a PAR lamp in a deep-black baffle trim will cause a crisp scallop. You should also be mindful of the vertical location of the center of scallops relative to architectural features such as cabinet frames, doorways, windows, etc. The best scallop effect should be symmetrical and requires careful measurement and planning.

Scallop height will vary with setback, trim, and lamp combination. The lower the ceiling, the higher the scallop tips should be, e.g. on an 8' ceiling, the scallop peaks should be approximately 9" - 15" from the ceiling.

Pendant Lighting (Kitchen Island)

Hanging pendants with glass or fabric shades are functional, beautiful pieces of art that provide surface mood lighting. An odd number of pendants is usually desirable for symmetrical spacing. The “middle” pendant should be placed in the center of the kitchen island, and each subsequent pendant should be spaced 18" to 24" on center for smaller sizes or up to 30" on center for larger sizes. The recommended mounting height, measured from the bottom of the pendant shade to the top of the surface (countertop/tabletop), is typically 29" to 33". Avoid placing the pendants directly over the edge of the counter; 12" to 14" from each edge is recommended.

Note: The greater the bottom diameter (aperture) of the pendant, the lower it should be mounted to avoid glare and visual exposure to the lamp. Pendant height also will vary depending on the height of the individuals living in the space.

Lamp and Trim Selection

Juno recessed housings are designed to accept a variety of different lamp types and trims. Each lamp type has unique performance characteristics and each trim has a different function and/or appearance. The following information will help you select the best lamp type and trim for your application.

Lamp Types

Lamps for recessed lighting can be categorized into directional and diffuse. Directional lamps contain integral reflectors to direct and control the light. Diffuse lamps produce omni-directional light and are used in conjunction with trims that have reflectors to control their distribution.

Directional Lamps

LED (Dedicated)

LED light sources can be integral to the fixture or a screw-in retrofit. Light output and color consistency have improved dramatically since LEDs were first introduced, and today they represent the state of the art in residential lighting. LEDs are more easily dimmed than CFLs, have a 50,000-hour rated life, and produce minimal UV with virtually no projected heat. Although more expensive than conventional light sources, LEDs are very energy efficient and especially useful for inaccessible locations or where long lamp-life lighting applications are desirable, such as kitchens, tall ceilings, etc. Optimal performance results from integrating the LED package into the housing design so that internal heat is well dissipated and the optics are customized for the LED light engine. This approach is superior to the "one size fits all" nature of screw-in retrofit LEDs. Juno dedicated LED housings typically offer 50,000-hour rated service life.

Incandescent R and BR lamps

R (reflector) and BR (bulge reflector) lamps are made of "soft glass" with an integral funnel shaped reflector. These lamps are available in several sizes and wattages in both spot and flood patterns and are the most economical type of directional lamp. R/BR Flood lamps produce a pleasant, warm, diffuse light well suited for general ambient illumination and subtle directional lighting. Like the incandescent A-lamp, R and BR lamps are subject to increasing legislative regulations on energy consumption. Typical rated life: 2,000 hours.

BR30

Halogen PAR lamps

Parabolic Aluminized Reflector (PAR) lamps are similar to R lamps, but have a more controlled lens/reflector optical system. Clearly recognizable by their thicker pressed glass construction, these halogen sources produce whiter, more concentrated beams of light. Available in a wide variety of sizes, wattages, and beam spreads, PAR lamps are well suited for higher-level ambient lighting, task lighting, and accent lighting. Typical rated life: 2,000 hours.

PAR30L

MR16 & PAR36 low-voltage lamps

These halogen sources have smaller "point-source" filaments that are accurately aligned in integral computer designed reflectors. This combination produces precisely controlled beams of light in a tremendous variety of beam patterns and intensities. Low-voltage lamps are used in special fixtures that contain a step-down 12-volt transformer. They are best used to precisely highlight artwork, sculpture, and architectural details and to create other dramatic effects. Typical rated life: MR16-5,000 hours, PAR36-2,000 hours.

PAR36

MR16

Diffuse Lamps

Incandescent A-Lamps

Also known as general service lamps, A-lamps provide a soft, warm, uniform ambient illumination. They are ideally suited for use in downlight and wall wash trims that contain integral reflectors. Incandescent A-lamps are the most economical, often costing less than a dollar each. White coated A-lamps are preferable to the generic inside frost types. Typical rated life: 750 hours.

A-Lamp

Halogen A-line Lamps

Similar in appearance to incandescent A lamps, halogen A-line lamps incorporate a halogen capsule inside as opposed to a standard bare filament. Like all halogen sources, they are typically whiter, brighter, and last longer than standard incandescent lamps. As energy regulations become more restrictive, these could replace standard incandescent A lamps, since they are about one third more energy efficient.

BT15

Compact Fluorescent Lamps (Dedicated)

Compact Fluorescent Lamps (CFL) are similar in size and light output to A-lamps, but produce 3-5 times more light per watt consumed. This energy savings, combined with a significantly longer rated life, makes them ideal for ambient lighting in rooms such as kitchens which experience long burning hours. CFLs are used in special recessed housings with integral ballasts that regulate the starting and operating current. CFLs are more difficult and costly to dim and do not create the characteristic intimate feeling associated with dimmed incandescent or halogen lamps. Typical rated life: 10,000 hours.

Color Temperature

Lamps have different color characteristics that can affect the appearance and feel of a space. The color that a lamp produces is expressed as its Color Temperature, in degrees Kelvin (K). Like an iron in a fire, the higher the temperature, the cooler the color of the light. Standard incandescent lamps have a 2700° K color that is warm and familiar... something you might associate with a table lamp or chandelier. Halogen lamps have a whiter, crisper 3000° K color. Halogen lamps are also more efficient than standard incandescent lamps, producing up to 50% more light per watt of energy consumed. Both standard incandescent and halogen lamps can be dimmed to create a warmer, more intimate atmosphere. (Placing incandescent or halogen lamps on dimmers also will considerably extend their service life.)

Lamp Styles

Recessed trims are available in a variety of basic aperture styles described below. The correct aperture style for a given application is partially dependent on personal preference.

Baffles

Baffles are the most popular of all residential recessed trims. They are deeply grooved to absorb extraneous light and create a crisp architectural appearance. They are economical, easy to maintain, and available in black or white. Black baffles have low aperture brightness. White baffles blend with the ceiling to eliminate the appearance of dark holes and serve to soften light scallops on adjacent walls.

Cones

Cones produce a low brightness aperture with a choice of polished clear, gold, black, haze, wheat haze or pewter. Clear and gloss white cones are the least conspicuous, gold provides a warm accent to a room, and black serves to more fully obscure the lamp and lamp image. Haze has a softer, cool appearance, depending on the light source, that blends with white ceilings. Wheat haze has a soft, warm appearance that coordinates with warmer-tone interior finishes.

Multipliers

Multipliers are similar in appearance to cones but are designed to control the omni-directional light from diffuse A-lamps and CFLs. They are available in white, clear, gold, haze and wheat haze finishes.

Lensed

Lensed apertures are designed to provide a very diffuse light quality and to protect the lamp. They are particularly useful in wet locations such as bathrooms and eave lighting, as well as closets and pantries.

Luminous

Luminous trims combine the diffuse quality of a lensed trim but with an open downlight component. Luminous trims provide efficient downlighting while producing a pleasing, soft glow of light on the ceiling and upper part of walls.

Adjustables

Several types of adjustable trims are available for accent and perimeter lighting. Eyeball style trims are the most economical. Gimbal rings and recessed adjustables provide excellent adjustability while concealing the light source.

Wall Washers

A variety of wall wash trims are designed to provide even ceiling to floor illumination of vertical surfaces without light scallops. The scoop wall wash is the most economical. Specular clear kicker reflectors direct light toward wall surface and provide a combination of efficient downlighting and wall wash illumination.

Aculux® Only

What trim size is right for the application?

This is a commonly asked question that does not have a single answer. Generally, smaller aperture trims are less conspicuous and therefore considered more architecturally desirable. Six-inch trims are still the mainstay for general residential downlight and wall wash illumination, due to their ability to accommodate a wide range of lamps, wattages, and efficient optics. Five-inch trims have become popular for task lighting, and even general lighting in smaller scale settings. Four-inch trims are useful for task and accent lighting with short throw distances and/or lower light level requirements, such as over a bar or counter. They have also become the choice for inconspicuous yet powerful precision accent lighting. Juno unique three-inch trims find use in close proximity downlighting in niches and casework. Juno one-inch and two-inch LED downlights and gimbals are also ideal for these types of applications. With the advent of LEDs, smaller apertures can now provide lumen output previously achieved in only larger sizes.

The new standard in
efficiency, performance
and application diversity

LED Downlights

Juno LED downlights are setting new standards for efficiency, performance and application diversity.

Since their inception, Juno LED Downlights have been an unqualified success, offering unprecedented energy savings, superior quality, brilliant white light, and exceptional service life. The Juno LED product family has taken another step forward with a host of LED fixtures; Generation 4 downlights, slope and super-slope downlights, mini downlights, 2" downlights and adjustables as well as Retrofit LED modules available in a downlight and gimbal version.

No matter what your application, you'll find that Juno LED Downlights have advanced the art and science of illumination to the next plateau, with a range of fixtures that are engineered in the USA by our highly regarded design team.

Juno LED Advantages

- LEDs use as little as 15% of the energy of conventional lighting
- Expected service life of 50,000 hours (typically 11-years or more of maintenance-free operation)
- 25-times the life expectancy of incandescent
- LEDs contain no toxic lead, mercury, or PCBs
- Available with exclusive WarmDim® technology
- 1", 2", 4", 5" and 6" aperture options
- 600, 900 or 1400 lumen can be used in IC or TC applications
- 2700K, 3000K, 3500K, or 4000K color temperature options
- Available with standard Juno trims

LED housings ... the energy-efficient advantage

ENERGY STAR®

Most Juno LED Downlights are listed as ENERGY STAR Qualified to luminaire V2.0 requirements. ENERGY STAR is a government sponsored program that establishes criteria and testing requirements to ensure energy efficient luminaires meet consistent performance standards. Many local utilities offer builder and homeowner rebates for installing ENERGY STAR Qualified products.

T24

Juno LED Downlights are certified to meet the high efficacy requirements of California Title 24 (JA8-2016).

Air-Loc®

Juno IC LED housings are Air-Loc rated and designed to minimize air leak paths. Air-Loc rated housings are tested in accordance with ASTM E283 and certified by an independent laboratory to be in compliance with the minimum air-leakage standards as set in the International Energy Conservation Code, as well as several state energy codes, including Washington State.

The industry's most comprehensive LED downlight offering

Housings

Juno offers the most comprehensive LED lineup in the industry, including downlights for standard and slope ceilings; new construction, remodel, and retrofit; plus adjustable eyeballs, minis, and gimbals. Generation 4 LED downlights are available with IC or TC rated housings with light output up to 1400 lumens. And they are all designed and engineered in the USA to the very highest standards.

Color Temperature Offering

Select from a large range of color temperatures to suit any application: 2700K, 3000K, 3500K and 4000K.

Trims

Juno LED downlights are as beautiful as they are efficient. The extensive trim options include baffle, cone, hyperbolic, decorative, lensed, and wall wash in a wide variety of handsome colors and finishes. The trim collection is compatible with both 600-, 900- and 1400-lumen housings.

Mini LED Downlight/Gimbal

Big-time illumination for small spaces

Ideal for niches, bookcases, soffits, cabinetry and so much more, Juno Mini LED Downlights and Gimbals open-up a multitude of task and accent lighting possibilities, especially when installation space is at a premium. Using less than 5-watts input, these versatile little recessed luminaires are the most energy-efficient solution for providing the desired look and just the right amount of light in confined areas.

A. Ultra-compact design

Able to fit in the palm of your hand, these versatile, miniature fixtures easily integrate into the smallest of spaces. From kitchen soffits to cabinetry and architectural niches... even a wet location version that is perfect for outdoor applications such as under eaves.

B. Super-efficient LED light engine

The latest generation of high performance LEDs produce over 300 lumens in 2700K, 3000K, 3500K or 4000K; exceeding the performance of 20W halogen MR11 lamps while consuming less than 5-watts of power. 80+CRI color rendering out of an inconspicuous 1" aperture with a 50,000 L70 service life... truly remarkable! Optional 90 CRI minimum also available.

C. Versatile Optics

Precision injection molded spot, narrow flood and flood optics provide maximum versatility for task, accent and even ambient/ circulation lighting in low ambient lighting applications such as home theatres.

D. Familiar, easily dimmable 12V AC operation

An onboard 12-volt LED driver allows the mini-downlight and gimbal to be operated off of Class 2 Juno 12-volt electronic or magnetic transformers, eliminating concerns over voltage drop while providing reliable, fool proof dimming using commercially available low voltage style halogen dimmers.

E. Easy installation

Fixtures and the TL602E transformer install from below the ceiling through miniature holes that can be cut using standard 2" or 2-3/8" hole saws. Fixtures grip securely in place on material thicknesses from 1/8" to 1" using easy to use "mouse-trap" springs. And both the fixtures and the TL602E transformer are rated for direct contact with insulation.

F. Simplified daisy-chain wiring

Unlike most low voltage systems which require a home run back to the transformer from each fixture, Juno Mini-Downlights and Gimbals have an integral 4-port terminal block that facilitates fixture to fixture wiring using commonly available type CL2 or NEC equivalent 18-12 AWG wire.

IC-Rated Mini LED Downlight and Mini LED Gimbal

Ideal for niches, bookcases, soffits, displays, elevators and so much more, Juno Mini LED Downlights and Gimbals open-up a multitude of task and accent lighting possibilities.

2" LED Downlights & Adjustables

Energy-efficient, discreet aperture, high performance LED lighting

The second generation of Juno 2" LED downlights and adjustables feature the latest high lumen output LED array, binned to within 3-step MacAdam Ellipse, exceeding ENERGY STAR® requirements. They provide superior fixture-to-fixture color consistency and are available in color temperatures of 2700K, 3000K, 3500K, and 4000K with 80 CRI or 90 CRI minimum. Dimmable LED drivers now come in a choice of 600 or 1000 lumen outputs. Both driver options are offered with 120-volt only operation (compatible with most incandescent dimmers) or universal 120-277V operation (compatible with most 0-10V protocol dimmers). Additionally, field-interchangeable optics are available to provide distributions ranging from 18° to 40°. Energy-efficient, stylish Juno 2" LED downlights and adjustables are the little something extra for today's residential and commercial lighting applications.

A. Advanced Light Engine: Advanced LED technology produces up to 1,000 lumens from as little as 11 watts or 600 lumens from as little as 7 watts input. LEDs are binned to within a 3-step MacAdam Ellipse for superior fixture to fixture color consistency. Color temperatures of 2700K, 3000K, 3500K and 4000K with 80 CRI or 90 CRI minimum.

B. LED Driver: Specify either 600 or 1,000 lumen output; for both versions, choose either the dedicated 120-volt driver compatible with incandescent, magnetic low voltage and ELV dimming or the universal 120V-277V driver with 0-10V dimming.

C. Downlight Trim: All metal trim is offered in cone and baffle styles. Round aperture downlight features shadow free knife edge trim ring to blend seamlessly into the ceiling. **Adjustable Trim** (not shown): Die cast gimbal trim features 35° tilt adjustment. Round aperture adjustable features shadow free knife edge trim ring to blend seamlessly into the ceiling.

D. High Efficiency Optics: Three field interchangeable TIR optics available in 18°, 24° and 40° beam angles.

E. Superior Thermal Management: LED array is attached to die cast trim with integral heat sink to provide excellent heat transfer and ensure long life. At the end of their rated life, LEDs can be expected to produce 70% of their initial light output with no perceptible changes in color.

F. Low Profile Housing: Permits easy installation in a wide variety of applications and fits nicely within 2 x 6 ceiling joists for shallow applications.

G. Easy Installation: Fixture easily installs from below the ceiling through a small 2-5/8" ceiling cut out. Galvanized steel plaster frame accommodates ceiling thicknesses from 1/2" to 1". New construction mounting frame with Real Nail® 3 telescoping bar hangers to position fixture and locate wiring prior to ceiling installation is also available.

2" LED Round Downlights & Adjustables

Two Part Ordering System

Order Driver and LED Trim Module separately

The Juno 2" LED Gen 2 system allows you to create a modular assembly by selecting your desired driver output and pairing it with the Gen 2 trim module of your choice.

Trims

Juno 2" LED round downlights and adjustables are offered in an extensive selection of trims. Downlights are available in cone and baffle styles, and downlights and adjustables are offered in white, black, satin nickel and brushed bronze with various combinations. You are certain to find the perfect fixture for any room in the home or office.

4" Internally Adjustable LED Fixture

Adjustable, beautifully made fixtures that blend seamlessly into the ceiling

Downlighting, accent lighting, sloped ceiling or wet location, round or square aperture, it's the one fixture for all your needs – now and in years to come.

Juno 4-inch internally adjustable LED fixtures are agents of change. Imagine just about any change in room décor or interior design you might desire, and these fixtures are ready to respond.

Let's say you would like to change the trim.

Instead of having the trim integrated with the light source, trims for these fixtures are sold separately. You can change color or style anytime you want without needing to replace the entire luminaire. And there are a bevy of trims to choose from.

Want to adjust the light beam?

These fixtures offer internal adjustability of up to 35-degrees vertical and 360 degrees rotation so that light can be directed where needed. There are no mechanical parts below the ceiling plane ... just a beautifully made fixture that blends seamlessly into the ceiling. Redirect the light pattern anytime a change is desired.

Changing the beam spread is easy, too.

High-precision TIR optics are field interchangeable. The fixture series offers a 40-degree flood, a 30-degree narrow flood or 18-degree spot – all easy to switch out when your lighting design needs change. The fact is, these fixtures are all about change and adaptability. The dimmable drivers enable change to lumen output to alter light intensity and mood. The media holder accepts a wide variety of lenses, films, and filters, permitting unlimited changes to lighting effects.

4" Internally Adjustable LED Fixtures

700 and 1000 Lumen

Two lumen packages, choices in LED color temperature, multiple driver options and extensive trim selection...if you want stylish, efficient fixtures that offer a magnitude of options for customizing your fixture to your needs now or in the future, you won't find a better solution than Juno 4" internally adjustable LED fixtures.

Trims

All trims for Juno 4-inch internally adjustable LED fixtures are sold separately and easily changed to adapt to future needs. The available styles and finishes are extensive.

This stunning trim collection is an expansion of the popular Juno 4-inch LED fixture family and offers perfectly matched finishes. Round trims feature a beveled edge design that blends cleanly with the ceiling.

Now you can change trims whenever lighting requirements dictate or whenever the mood strikes you. It's all part of the visionary philosophy behind the design of these extraordinary fixtures.

4" LED Recessed Gimbals

Energy-efficient, stylish downlighting for residential applications

These 4" gimbals are the latest development in the exceptional Generation 4 LED Downlight family. In addition to being a step forward in energy efficiency, they also offer:

- Designer-grade quality with gimbal adjustability
- Exceptional color accuracy with 90+ CRI
- Dedicated, new construction or remodel, Air-Loc® LED housings
- Accent-lighting trim modules with plug-in LED light engines
- ENERGY STAR® certified and certified to meet the height efficacy requirements of California Title 24 (JA8-2016)
- A+ Capable configurations, compatible with A+ Certified solutions
- Designed and engineered in the USA

4" LED Recessed Gimbals...the next in line

A. Generation 4 LED Light Engine Advanced LED technology produces more than 600 lumens from just 8-watts input. LEDs are binned to within 3-step MacAdam Ellipse for superior fixture to fixture color consistency. Color temperatures of 2700K, 3000K, 3500K and 4000K with 90+ CRI minimum.

B. LED Driver Specify either a dedicated 120 volt driver compatible with incandescent, magnetic low voltage and ELV dimming or universal 120V-277V driver with 0-10V dimming.

C. Adjustable Gimbal Trim Die cast gimbal trim features shadow free knife edge to blend seamlessly into the ceiling. Available finishes: white, black, satin chrome and aged bronze.

D. High Efficiency Optics Three field interchangeable TIR optics available in 18°, 30° and 40° beam angles. The light engine trim module is supplied with 30° optic installed.

E. Superior Thermal Management LED array is attached to die cast trim with integral heat sink to provide excellent heat transfer and ensure long life. At the end of their rated life, LEDs can be expected to produce 70% of their initial light output with no perceptible changes in color.

F. Low Profile Housing Permits easy installation in a wide variety of applications and fits nicely within 2 x 6 ceiling joists for shallow applications. New construction housings are supplied with Juno Real Nail 3® bar hanger system. For suspended ceilings the integral T-bar notch can be used to secure the housing into the ceiling grid – no accessory clips required.

G. Easy Installation: LED light engine trim module features a plug-in connector for easy installation with the housing.

Juno® 4" LED Recessed Gimbals

Simple, Two-Part Ordering System

Order your housing and LED Trim Modules separately to complete your fixture assembly. Installation is literally "a snap" with our quick connect system.

Adjustable Accent LED Trim Modules

The die-cast gimbal-ring trim provides 35° tilt adjustment and features a shadow-free, knife-edge design that blends seamlessly into ceilings. It's stylishly finished in white, black, satin chrome, or aged bronze.

WH White

BL Black

SC Satin Chrome

ABZ Aged Bronze

LED light engine trim module features field interchangeable TIR optics. Trim module ships with the Narrow Flood optic installed. Spot (TIR1 SPT) and Flood (TIR2 FLD) optics are also available.

Trim module can accommodate one 2-inch diameter beam control accessory. See specification sheet for available media accessories.

Regulatory Listings and Standards

- UL and C-UL Listed for Damp Location
- Listed for Direct Contact with Insulation
- UL Listed for through-branch wiring
- ENERGY STAR® Certified
- RoHS Compliant
- Juno LED Downlights are certified to meet the high efficacy requirements of California Title 24 (JA8-2016)

Standard LED dimming

Juno WarmDim dimming

WarmDim® LED Dimming 4", 5" and 6", 600 & 900 Lumen LED Downlights

Juno® technology breakthrough brings warmth to LED dimming

Juno Generation 4 LED Downlights with the exclusive patented WarmDim feature bring atmosphere and romance to LED lighting. Juno WarmDim downlights incorporate a proprietary, micro-processor controlled light engine that warms the LED color temperature while dimming to capture all the warmth and ambiance previously achieved only with incandescent dimming. Now you can match the mood to every occasion while still experiencing the operating efficiencies of LED lighting. It's a Juno first ... a Juno exclusive or recessed downlights.

Like all the downlights in the Juno Generation 4 family, the WarmDim version raises the bar for LED efficiency, producing over 600 lumens of high-quality light while using just 10 watts. They are offered in new construction and remodel housing styles and are approved for use in both insulated and non-insulated ceilings. They include push-in electrical connectors and all the easy-installation features you have come to expect from Juno.

6" WarmDim LED
New Construction Housing

- A. WarmDim® LED light engine:** Proprietary patented WarmDim LED light engine features micro-processor controlled dimming that replicates the warmth of incandescent dimming. Dims from 3000K CCT at full lumen output to a warm 2000K while maintaining 90 minimum CRI throughout the dimming range (Patent US 8,710,754).
- B. LED driver:** Dedicated 120V LED driver supports WarmDim forward phase dimming using readily available incandescent, magnetic low-voltage, and electronic low-voltage dimmers.
- C. Effective thermal management:** This is achieved by integrating the light engine into a thermally conductive housing that provides uninterrupted heat transfer for remarkable LED longevity. Service life is rated at 50,000 hours with 70% lumen maintenance and no perceptible color shifts.
- D. Versatile installation:** Low-profile housings fit easily within 2 x 6 joists to accommodate shallow installations. New construction housings are supplied with Juno Real Nail 3® bar hangers; an integral T-bar notch secures housings to suspended ceiling grids without the need for clips. Remodel housings also available. See page 59 for a full description on the Real Nail® 3 bar hangers.
- E. Efficient, low-glare optics:** High-performance optic system produces uniform light distribution and reduces glare. The reflector and high-transmission diffusing lens are computer optimized for each aperture size, and the lens conceals the LED array, providing the aesthetic of a deeply regressed PAR lamp.
- F. Extensive trim collection:** WarmDim LED recessed housings are compatible with a broad selection of existing Juno 4", 5" and 6" open, lensed, wall wash, and decorative trims.

Unlike traditional LED dimming, Juno WarmDim® warms as it dims, emulating incandescent dimming.

Traditional LED Dimming

Juno WarmDim® Dimming

4" IC-Rated 600 & 900 Lumen WarmDim® LED Downlights

Juno's exclusive WarmDim technology brings the warmth and atmosphere of incandescent dimming to the world of LED downlighting. The smaller 4" aperture size blends inconspicuously into the ceiling.

4" WarmDim® IC1LED Series

(New Construction Shown)

Dedicated 4" WarmDim LED new construction or remodel housings with integral light engine and dimmable driver. Dedicated 120V driver with forward phase and ELV dimming. Shallow housing allows for fit into a 2x6 construction. IC housing is designed for use with IC or Non-IC construction. Wide flood optic provided as standard.

Generation 4

4" IC-Rated 600 & 900 Lumen LED Downlights

Ultra-efficient LED lighting with extra style and flair

The smaller aperture of the 4-inch, Juno Generation 4 LED downlight offers the “designer-look” that perfectly complements many of today’s upscale residential interiors. These ultra-efficient fixtures produce up to 900 lumens of brilliant white light, while requiring just 11-watts input to deliver over 85 lumens per watt. Offered in new construction or remodel housing styles, they are approved for use in both insulated and non-insulated ceilings. They include push-in electrical connectors and all the easy-installation features Juno is famous for.

A. Generation 4 LED light engine: Advanced

LED technology produces up to 900 lumens from just 11-watts input. LEDs are binned to exceed ENERGY STAR® requirements and provide superior fixture-to-fixture color uniformity. Color temperatures of 2700K, 3000K, 3500K, and 4000K are available; 90 CRI minimum.

B. Superior thermal management: Double wall, shallow construction. LED array is attached to high-purity aluminum, thermally conductive inner housing and heat sink, which provides superior heat transfer to ensure long life of LEDs. At the end of their 50,000 hour rated life, the LEDs can be expected to produce 70% of their initial light output with no perceptible changes in color.

C. Low-glare, high-efficiency optics: The reflector and high-transmission diffusing lens are optimized for the smaller 4" aperture, resulting in an optic system that provides uniform light distribution and reduced glare. The lens also serves to conceal the LED light source, producing an aesthetic similar to a deeply regressed PAR20 lamp.

D. LED driver options: Specify either dedicated 120-volt driver with forward and reverse phase dimming or Multi-Volt (120-277V) eldoLED driver with 0-10V dimming.

E. Extensive trim selection: The 4", Generation 4 LED recessed housing is compatible with a wide range of existing Juno open and lensed trims.

F. Real Nail® 3 Bar Hangers

The industry's best engineered mounting system ... Juno housings originated the Real Nail bar hanger system that set the standard for quality and ease of installation.

- **Patented Real Nail® 3 Hangers**

Permit quick housing placement anywhere within 24" O.C. joists or suspended ceilings.

- **Captive Bugle Head Nail**

Quickly secures housing in place. The nail is easily removable for quick housing repositioning/relocation without changing the bar hanger or nail.

- **Bar Hanger Locking**

Secures bar hanger adjustments with the oversized locking screw or the quick-lock screwdriver slot feature.

- **Patented Break-Away Design**

Score lines on the bar hangers provide a clean and fast break to fit the housing in tight applications.

- **T-Bar Mounting**

Integral T-bar mounting feature secures the housing to suspended ceilings; no additional parts required.

- **Locking System**

Quick-Loc slot and oversized set screw lock fixture in position.

4" IC-Rated 600 & 900 Lumen Generation 4 LED Downlights

The smaller aperture of the 4", Generation 4 downlight offers the “designer look,” while advanced LED technology from Juno maximizes energy savings. The extensive trim offering complements a wide range of interior styles.

Generation 4

5" and 6" IC-Rated 600, 900 & 1400 Lumen LED Downlights

Offering ultra-efficient, high-performance illumination for residential interiors

With the latest generation of LED downlights, Juno offers greater efficiency, higher performance, and more sophisticated optics than ever before. For the Generation 4 LED line, Juno has reduced the energy consumption of its IC-Rated downlight by over 25%.

Juno Generation 4, IC-Rated, 600-, 900- and 1400-lumens LED downlights provide superior illumination for both standard and high ceiling applications. Designed for either new construction or remodel applications, they are approved for use in both insulated and non-insulated ceilings. They include push-in electrical connectors and all the easy-installation features Juno is famous for.

A. Advanced thermal management: Thermally conductive aluminum housing is secured to the plaster frame and draws heat away from the LEDs through the continuous metal construction to ensure long life of the LEDs. At the end of their 50,000 hour rated life, the LEDs can be expected to produce 70% of their initial light output with no perceptible changes in color.

B. Generation 4 LED light engine: The light engine features the latest in high-performance LED arrays. The 600-lumen fixture uses just 10.5 watts input; the 900-lumen fixture just 14.6 watts and 1400-lumen fixture just 16 watts. LEDs are binned to exceed ENERGY STAR® requirements and provide superior fixture-to-fixture color uniformity. Available color temperatures are 2700K, 3000K, 3500K, and 4000K with 90 CRI minimum.

C. Extensive trim options: Generation 4 LED recessed housings are compatible with a broad selection of existing Juno 5" and 6" open and lensed trims. A dedicated LED scoop trim is also available for wall wash applications.

D. Easy installation: Lower-profile housing permits easy installation in a wide range of applications and fits nicely within shallow, 2 x 6 ceiling joist. New-construction housings are supplied with the Juno Real Nail 3® bar hanger system. For suspended ceilings, the integral T-bar notch can be used to secure the housing onto the ceiling grid – no accessory clips required. See page 59 for a full description of the Real Nail® 3 bar hangers.

E. High-efficiency, low-brightness optics: The computer-optimized reflector features a high-reflectance white finish that together with a high-transmission diffusing lens produces uniform aperture luminance while concealing the LED light source. From below, it looks like an incandescent fixture with a deeply regressed PAR30 lamp. Alternate optics are available for all 5" and 6" Generation 4 fixtures. Wide-flood beam pattern is standard; medium-flood, narrow-flood and spot are also available. Reflector styles can be changed easily via the convenient twist and lock accessory feature.

F. LED driver: Dedicated 120-volt driver with forward and reverse phase dimming.

Beam Patterns

Juno Generation 4, 5" and 6", IC-Rated, 600, 900 & 1400 Lumen LED Downlights are available in four optics. Wide-flood beam pattern is standard; medium-flood, narrow-flood and spot are also available. Reflector styles can be changed easily via the convenient twist and lock accessory feature.

5" IC-Rated 600, 900 & 1400 Lumen Generation 4 LED Downlights

This 5", Generation 4 LED downlight is over 25% more energy efficient than its predecessor, requiring just 16 watts to produce up to 1400 brilliant lumens. Available for both new construction and remodel applications.

5" New Construction

600-900 lm

Retrofit LED Trim Modules

Ultra-efficient, super-easy, very affordable

With Juno Retrofit LED Trim Modules, standard 6" recessed housings can be quickly and conveniently upgraded to efficient LED illumination. These economical LED trims are available in 600 or 900 lumen modules and the patent pending WarmDim® technology is offered with the 600 lumen LED trim modules. The J6RL series provides up to 900 lumens of brilliant illumination that is equivalent to the output of a 75W PAR30 ... but requiring just 14.5 watts input. ENERGY STAR® Qualified. Dimmable with most incandescent, magnetic low-voltage, and electronic low-voltage dimmers.

A. All-In-One Design:

Downlight:

LEDs, driver and trim are contained in a single unit. Includes a whip adapter with screw base and quick-connect plug for easy retrofit in 6" housings equipped with a medium-base socket. Or the unit can be installed directly into a dedicated Juno quick-connect housing. Retrofit compatible with Juno 6" standard and shallow housings as well as with other manufacturers' housings*. Module is wet location listed and designed for use in IC or non-IC, new-construction or remodel housings*.

Eyeball:

All-in-one trim, driver, and adjustable eyeball are designed as a single unit for installation into retrofit, new construction, or remodel applications. Rotates 358 degrees with vertical adjustment of 30 degrees. For use with IC or non-IC, 6" housings. Compatible with Juno 6" standard and shallow housings as well as those of other manufacturers*.

- B. LED Light Engine:** The LED array is integrated with a one-piece, high-purity aluminum, thermally conductive trim to provide uninterrupted heat transfer. Ensures long life of the LEDs even when used in housings covered with insulation. At the end of their 50,000 hour rated life, the LEDs can be expected to produce 70% of their initial light output with no perceptible changes in color.

- C. Efficient Thermal Management:** The LED array is integrated with a one-piece, high-purity aluminum, thermally conductive trim to provide uninterrupted heat transfer. Ensures long life of the LEDs even when used in housings covered with insulation. At the end of their 50,000 hour rated life, the LEDs can be expected to produce 70% of their initial light output with no perceptible changes in color.

- D. Easy Installation:** Whip adapter with screw base and quick-connect plug screws into 6" housings equipped with medium-base sockets. It's nearly as easy as installing a conventional lamp. Or for California Title 24 compliance, Retrofit LED Modules can be installed into dedicated Juno new-construction or remodel housings with hard-wired quick connects. Torsion springs secure trim into housing.

E. High-Efficiency, Low-Glare Optics:

Downlight:

A computer-optimized reflector and deeply regressed high-transmission diffusing lens provide uniform light distribution and effective glare control, while concealing the LED light source from view.

Eyeball:

A computer-optimized reflector and high-transmission diffusing lens create an efficient, aesthetically pleasing optic system that provides uniform light distribution while reducing glare and masking the LED source. Wide-flood beam pattern is standard; medium-flood, narrow-flood, and spot also available. Reflector styles can be changed easily via the convenient twist-and-lock accessory feature. See page 84 for optic options.

F. Aesthetic Trim:

Downlight:

The Retrofit LED Downlight Trim Module ships complete with either a baffle or cone insert that mimics the aesthetics of Juno's most popular trims. These interchangeable trim inserts can be easily changed in the field to customize the look of the product.

Eyeball:

An attractive addition to any décor, the aluminum, adjustable eyeball trim module follows traditional Juno styling and is finished in lustrous white.

- G. Dimmable LED Driver:** State of the art 120V LED forward phase driver is dimmable using most incandescent, magnetic low-voltage, and electronic low-voltage dimmers.

- H. Juno Retrofit LED Trim Modules with quick-connect housings comply with Title 24 requirements** Juno Retrofit LED Trim Modules can be installed in dedicated, 6" Juno new-construction or remodel housings via hard-wired quick connects. When installed in this configuration, these units offer full California Title 24 compliance.

Supplied whip adapter with screw base and quick-connect plug permits quick installation in 6" housings equipped with medium-base sockets.

* See spec sheet for housing compatibility.

Basics Series™ Retrofit LED Downlight Trims

Economical 4", 5" and 6" LED Trim Modules

You no longer need to pay a premium to experience all the benefits of LED lighting. With Juno Basics Series Retrofit LED trim modules, upgrading your existing 4", 5", or 6" recessed fixtures is inexpensive and nearly as simple as replacing an incandescent lamp.

It's the affordable way to upgrade to LED lighting

Ultra-efficient Basics Series Retrofit LED Trims are offered in two lumen packages. The 13.5-watt RLD Series provides up to 1000 lumens, while the 10-watt RLD Series offers up to 700 lumens. Both lumen packages offer energy savings of up to 85%. Plus, with a rated service life of 44,000 hours, Basics Series LED retrofits last about 18-times longer than incandescents, providing many years of maintenance-free operation. Additionally, they are ENERGY STAR® Certified and can be used to comply with Title 24, Part 6, JA8 high efficacy LED light source requirements.

Juno Retrofit LED Basics Series trim modules don't scrimp on aesthetics. The aluminum housings feature a white baffle with a built-in flange. A deeply regressed diffusing lens conceals the LEDs from direct view and provides uniform aperture luminance. With color temperatures of 2700K, 3000K or 3500K and 90+ CRI, the trims offer superb light quality and superior color rendering and consistency. These handsome modules blend nicely with the ceiling and enhance the appearance of any room in the house, including kitchens, living rooms, and bathrooms. Basics Series LED retrofits operate on 120VAC and are dimmable to 5% with many incandescent, magnetic low-voltage, or electronic low-voltage wall box dimmers.

Installing Juno Retrofit LED Basics Series trims could not be easier. They can be quickly installed into Juno 4", 5", or 6" housings or virtually any other manufacturers' standard or shallow, new-construction or remodel, IC or Non-IC housing equipped with a medium-base socket. Basics Series LED retrofit modules are provided with a medium-base socket adapter with quick-connect that screws into the existing housing. After making the plug-in connection, the module is inserted into the housing and is held securely in place with the attached springs ... simple as that. And Basics Series LED retrofits are backed with a five-year warranty.

Juno® 4" Retrofit LED Basics Series Trim Modules

These LED retrofit trim modules are the easy, economical way to upgrade existing 4" recessed downlight housings to ultra-efficient LED illumination. Available in two lumen packages, they produce 650 lumens from just 10-watts or up to over 900 lumens from only 13.5 watts, offering energy cost savings of up to 80% compared to equivalent incandescent fixtures. With a rated service life of 44,000 hours, they provide many years of maintenance-free operation while delivering exceptionally accurate color rendering of 90+ CRI.

Product Specifications

4RLD

Medium-base socket whip adapter included with trims

- Delivers 650 lumens at 10-watts input, or up to over 900 lumens from 13.5-watts with 90+ CRI
- 2700K, 3000K or 3500K color temperatures
- Fast, easy, retrofit installation in almost any medium-base 4" housing using included socket adapter and quick connect
- Very affordable with no compromise in Juno quality
- Durable die-cast aluminum construction
- Knife-edge, white baffle trim with regressed lens
- Dimmable to 5% with many incandescent, magnetic low-voltage, or electronic low-voltage wall box dimmers
- Rated for use in IC (insulated ceiling) or non-IC housings
- 5-year limited warranty

Compatible Housings

Compatible with many 4" standard or shallow Juno-brand and alternative housings:

- Juno housings: IC1 and TC1 Series
- VuLite® housings: V4IC and V4TC Series
- Juno Quick-Connect LED housings: IC1 LEDT24 and IC1R LEDT24
- Lithonia® housings: L3 Series

Other housings include, but are not limited to:

- Halo® housings: H99 Series
- Thomas® housings: PS4 Series
- Capri® housings: P4 Series, R4 Series

V6RLTRB	 Torsion receiver bracket kit to install 6RLD into housings that do not have torsion receivers.

Basics Series™ Retrofit LED Adjustable Gimbal Ring

Economical 4", 5" and 6" Adjustable Trims

Juno Basics Series Retrofit LED trim modules make it easy and inexpensive to upgrade your existing recessed fixtures to energy-efficient LED illumination. Adjustable-gimbal trims enable you to achieve superb accent lighting throughout your home. These economical retrofits offer Juno-brand quality in a basic design that's as simple to install as replacing an incandescent lamp.

It's the affordable way to upgrade to LED accent lighting

Basics Series LED retrofit adjustables are available for 4", 5", or 6" housings and require just 10.5-watts input to deliver up to over 650 brilliant lumens. Compared to 65-watt incandescent fixtures, they provide superior quality light while offering energy savings of as much as 85%. Plus, with a rated service life of 44,000 hours, they last about 18-times longer than incandescent, providing many years of maintenance-free operation. These ultra-efficient LED retrofits are ENERGY STAR® Certified and certified to meet the high efficacy requirements of California T24 (JA8-2016).

The adjustable gimbal is designed for vertical aiming up to 35° and is offered in a choice of optics: narrow flood or wide flood. In this all-in-one design, the LED light engine is mounted directly to the housing for superior thermal management, and the gimbal trim with built-in flange is made of durable die-cast aluminum. With color temperatures of 2700K or 3000K and CRI of 90 minimum, the modules offer high-quality white light and outstanding color rendering and consistency.

These handsome trims are available in a white finish and feature a diffusing lens for LED concealment and uniform aperture luminance. They blend easily with any decor and provide beautiful accent lighting for every room of the home. Juno Basics Series Retrofit LED Adjustables are dimmable to 5% with many incandescent, magnetic low-voltage, or electronic low-voltage wall box dimmers

Installing Juno Basics Series Retrofit LED adjustable trims couldn't be easier. They are designed to quickly replace the lamps and trim in virtually any manufacturers' standard or shallow, new construction or remodel, IC or Non-IC housing equipped with a medium base socket. They also can be easily installed directly into Juno dedicated LED housings, using only the supplied plug-in quick connect.

Basics Series™ Surface Mount LED Fixtures

Affordable and easy-to-install, 4" and 6" fixtures

There's never been an easier to install LED fixture than this one. The Juno® Basics Series™ Surface Mount LED fixture attaches directly to any standard junction box in two simple steps. No recessed housing required. Take it out of the box, and you're almost done. Use it as a downlight or wall sconce. This super-thin fixture fits flush with any flat surface, mimicking the appearance of a recessed fixture. But without the need for a housing, installation time and fixture cost are kept to the bare minimum. This attractive, all-in-one design includes LED light engine, lens, and trim.

The Juno surface-mount design offers performance and efficiency similar to typical LED recessed fixtures. The 4" 10-watt 4RLS Series is available in a 700 lumen version, while the 6" 6RLS is available in two lumen packages. The 14.5-watt 6RLS Series provides an impressive 1000 lumens, while the 10-watt 6RLS Series offers 750 lumens. These ultra-efficient fixtures provide energy savings of up to 85% compared to equivalent incandescent light sources. They are available in 2700K or 3000K CCTs with excellent 90 CRI minimum color rendering. Dimmable to 5%, they are compatible with many incandescent, magnetic low-voltage or electronic low-voltage dimmers.

4RLS

6RLS

Juno® 4" and 6" Basics Series Surface Mount Fixtures

Product Specifications:

- 4RLS Delivers 700 lumens at 10-watts with 90 CRI minimum
- Two 6RLS light engines available. 750 lumens from only 10-watts and 1000 lumens from only 14.5 watts, both with 90 CRI minimum
- 2700K or 3000K color temperature
- Easy installation directly to junction box or existing 4" recessed housing via 4RLSRETROKIT or existing 5" and 6" recessed housings via 56RLSRETROKIT accessory
- Can be used as a downlight or a sconce
- Very low 1-1/8" profile (4RLS) and 1-1/4" profile (6RLS)
- Beveled aluminum frame with white finish
- Dimmable with most standard incandescent, magnetic low voltage and electronic low voltage dimmers
- Five year limited warranty

Qualified Dimmers

Compatible with incandescent, magnetic low voltage or electronic low voltage wall box dimmers. See specifications for a list of factory recommended dimmer models.

Accessories

Catalog #	Description
56RLSRETROKIT	Allows 6RLS to retrofit in 5" or 6" recessed housings. Kit contains: medium base adapter, mounting springs, and electrical connectors.

Saves up to 85% in energy costs when compared to 65W incandescent light source

Installation

Junction Box Mounting

- Installs directly into industry standard junction boxes
- Compatible boxes include 3-1/2" and 4" octagon junction boxes (1-1/2" minimum depth), round mud rings with 2-3/4" mounting centers and 3" and 4" diameter non-metallic boxes
- Quick-mount strap and spring securement system provides fast installation of fully assembled fixture to junction box
- Suitable for ceiling or wall mount
- Suitable for use within closet storage spaces when installed per NEC requirements

Recessed Housing Mounting - 4RLS

- Must use 4RLSRETROKIT accessory
- 4RLS is compatible with most 4" recessed incandescent housings with an inside diameter between 4" and 4-1/2" and a minimum height of 4"

Compatible Juno Housings - 4RLS

- Juno IC1 and TC1 Series
- VuLite® V4IC and V4TC Series

Recessed Housing Mounting - 6RLS

- Must use 56RLSRETROKIT accessory
- 6RLS is compatible with most 5" and 6" recessed incandescent housings with an inside diameter between 5" and 7" and a minimum height of 4"

Compatible Juno Housings - 6RLS

- Juno IC20, IC25, IC2, IC21, IC22, IC23, TC20 and TC2 Series
- VuLite V5IC, V6IC, V5TC, V6TC Series

Juno SlimForm™ LED Surface Mount Downlights

Sleek in form, when space is slim

Juno SlimForm downlights are economical and easy-to-install, surface mounted LED fixtures with an unobtrusive - less than 1" deep - profile that cleanly integrates and complements any décor.

Juno SlimForm™ LED Surface Mount Downlights

The low cost, low maintenance,
low plenum, low-profile fixture ...
high in performance and style!

JSF Series

JSFSQ Series

Features include:

- Standard white finish for round or square fixtures in multiple sizes; outputs up to 1800 lumens
- Mounts directly to a standard junction box – see specifications
- Multi-volt 120-277V (0-10V dimmable) or dedicated 120V (forward phase/ELV dimmable) drivers
- 2700K, 3000K, 3500K or 4000K color temperature with 90+ CRI
- ENERGY STAR® certified
- Can be used to comply with Title 24, Part 6, JA8 high efficiency LED light source requirements
- Wet Location listed with standard non-metallic housing

Quick and Simple Installation

Juno SlimForm Surface Mount Downlights are easily installed over a junction box. These fixtures are ideal for use in areas with limited plenum space or when recessed downlights are impractical.

Juno SlimForm™ LED Surface Mount Downlights

JSF Series - Rounds

Juno SlimForm JSF Series round-shaped fixtures come standard in white. Available in four sizes, four color temperatures and outputs up to 1800 lumens, they can be utilized across many applications including bathrooms, closets, hallways/common area, corridors, outdoor canopies and more.

¹ Available with 12IN and 14IN models only

² Available with MVOLT ZT option only

Juno SlimForm™ Accessories

Juno SlimForm fixtures can be accessorized by adding an optional trim or shroud. These accessories include field-bendable tabs that easily secure to the fixture without the need for tools!

Optional trims and shrouds provide a decorative look and feel like a recessed downlight for multi-family residential, hospitality and other commercial environments.

Trims

Field-installable trims 'wrap' around the exterior of the fixture to provide a decorative finish.

Shrouds

Optional field-installable shrouds offer a source shield and aesthetic similar to a recessed downlight with a baffle or cone trim finish.

Trims and shrouds are as easy to install as changing a picture frame. Simply bend the tabs over the fixture to hold it in place.

Juno SlimForm™ Field-Installable Accessories

Decorative trims and shrouds are available for use on Juno SlimForm 5" and 7" fixtures.

Options Include:

Round Trim (JSFTRIM)

Versatile, efficient, and economical

Incandescent Downlights

Juno's incandescent downlights are the industry's most comprehensive and versatile line. No matter what your application, you are certain to find the perfect solution... from new construction to remodel housings... from 3" miniature downlights to 6" downlights for general illumination... from white baffle trims to stunning satin-chrome trims. Whether it's general downlighting, task, wall washing, or accent lighting, Juno recessed incandescent fixtures will meet your every illumination need.

Juno incandescent downlights are designed and engineered in the USA for economy, efficiency, and ease of installation. Juno innovations such as IC housings that can be directly covered with insulation and sealed Air-Loc® housings offer substantial gains in energy efficiency. And Juno Real Nail® 3 bar hanger system leads the way in installation simplicity.

Juno Incandescent Downlight Advantages

- The industry's most comprehensive downlight line
- Aperture sizes of 3", 4", 5", and 6"
- Housings for either insulated or non-insulated ceilings
- Large selection of efficient, long-life halogen fixtures
- Extensive selection of high-quality reflector and trim finishes
- Easy installation with the Real Nail® 3 bar hanger system

Juno Incandescent Downlights

Versatile, practical, and economical accurately describes the lineup of Juno incandescent downlights. They're versatile in the wide selection of housing and trim styles and sizes ... practical in the design and installation features such as the patented Real Nail® 3 bar hanger system ... and economical in initial installed costs and energy efficiency.

Juno incandescent downlights are available in a wide variety of low-voltage and line-voltage models, new construction and remodel housings, and four aperture sizes for insulated or non-insulated installations.

Juno Incandescent Downlight Index

Features

- Shallow housing easily fits into casework and other tight spaces
- PAR16 halogen lamp produces focused accent lighting from a miniature 2-1/2" aperture
- Easy to use Real Nail® 3 bar hangers are pre-installed
- Unique plaster frame design facilitates new construction or remodel installation
- TC18 and TC19 series fixtures are shipped complete with housing, trim, and bar hangers

For an even smaller downlight with an energy-efficient LED light source, see page 35 for Juno Mini LED Downlights and Gimbals.

4" R/PAR20 Universals

These small aperture downlights utilize the popular PAR20 and R20 light sources. They are an excellent choice for lower installation-height applications such as soffits, casework and niches, as well as in settings with shorter beam-throw distances or lower light-level requirements.

4" R/PAR Housings

IC Housing

Energy-efficient, Air-Loc® housing can be covered with insulation. Air-Loc rated in combination with all trims. Includes Real Nail® 3 bar hangers (unless otherwise noted).

** Supplied with magnetic transformer.
*** Use dimmers specifically designed for low voltage magnetic transformers.

6" Standard Universals

Standard Universal downlights are offered with basic trim options but include all the installation and performance features Juno is known for.

6" Standard Universal Housings

IC Housing

Energy-efficient, Air-Loc® housing can be covered with insulation. Includes Real Nail® 3 bar hangers (unless otherwise stated).

- IC22** 6" IC New Construction Housing
- IC22 G** with pre-installed Air-Loc gasket
- IC22 S** with smaller footprint bar hangers (Real Nail® 2)
- IC22 S G** with smaller footprint bar hangers (Real Nail® 2) and pre-installed Air-Loc gasket
- IC22 W** with push-in electrical connectors
- IC22 W G** with push-in electrical connectors and pre-installed Air-Loc gasket

6" Shallow Universals

Shallow universal housings are the ideal solution where vertical installation space is limited. The overall housing height is only 5-3/4", permitting these fixtures to fit comfortably within 2 x 6 ceiling joists. Housings are available for new construction or remodeling, can be completely covered with insulation, and used with a variety of downlight, adjustable, or lensed trims.

High-performance lighting
with efficiency and style

Slope Ceiling LED Downlights

With an established legacy of leading the industry in slope ceiling applications, Juno Slope and Super-Slope LED downlights offer innovative solutions and energy-efficiency. These downlights provide the performance, efficiency and longevity of illumination in today's most avant-garde interiors.

Juno Slope LED recessed downlights are available in 4" and 6" apertures specifically engineered to install and blend seamlessly into sloped ceiling architecture while delivering the right amount of light for the application. Juno sloped ceiling LED housings are IC rated and can be installed in either insulated or non-insulated applications to cover pitch ranges of 2/12 to 12/12 with efficiency and style.

Juno Slope Ceiling LED Downlight Advantages

- Provides industry's smallest 4" slope ceiling downlight delivering over 1000 lumens
- 6" slope ceiling downlights deliver over 1400 brilliant lumens; also available with WarmDim® technology up to 1000 lumens
- Covers standard and super-slope applications ranging from pitch of 2/12 to 12/12
- Available with color temperatures of 2700K, 3000K, 3500K and 4000K
- Excellent color rendering of 90+ CRI
- Dimmable driver options include forward and reverse phase dimming and multi-volt driver (120-277V) with 0-10V dimming
- Extensive selection of trim styles that blend seamlessly with sloped ceilings
- Service life is rated at a remarkable 50,000 hours
- Patented 6" design (US patent # 8550669) and patent pending designs for 4"

4" IC-Rated LED Downlights for Slope and Super Slope Ceilings

Delivering 1000 high-performance lumens with efficiency and style

Offering internal adjustability of up to 35° vertical and 360° rotation using the patent pending adjustable light engine module, light can be directed where needed for downlighting or accent lighting applications. Adaptable for slope and super slope applications using the 46L and 48L series trims.

6" IC-Rated LED Downlights for Slope and Super Slope Ceilings

Delivering up to 1400 high-performance lumens with efficiency and style

Juno Slope and Super Slope LED housings are the industry's first recessed LED luminaires designed specifically for slope ceiling applications. The Juno Slope ceiling LED offering includes 6" new construction housings for both standard and super slope applications covering a pitch range of 2/12 to 6/12. Juno Slope and Super Slope LED housings can be used in insulated and non-insulated ceilings, and are engineered to the highest quality standards.

Both the Juno Slope and Super Slope LED Downlights are a perfect complement to existing Juno downlights, offering a similar below-the-ceiling aesthetic.

- A. Advanced thermal management:** Juno Slope and Super Slope LED Downlights achieve superior thermal management by integrating an extruded aluminum heat sink and a cast aluminum slider plate directly with the fixture housing. Advanced thermal-management technology permits the LEDs to easily attain their remarkable rated service life of 50,000 hours at 70% lumen maintenance ... even when covered with insulation.
- B. High-output LED light engine:** The light engine features the latest in high-performance LED arrays. Fixture output of up to 1400 lumens requires just 17.4 watts nominal – a mere fraction of the energy needed by conventional light sources. LEDs are binned to exceed ENERGY STAR® requirements and provide superior fixture-to-fixture color uniformity. With available color temperatures of 2700K, 3000K, 3500K and 4000K, and 90+ CRI.
- C. Aesthetic trim options:** Juno LED slope ceiling housings are compatible with a selection of existing Juno 6" slope ceiling cone, baffle and lensed trims. Juno downlight trims feature shadow-free, knife edge trim rings that blend unobtrusively with sloped ceilings and are removable for painting if desired.
- D. Easy installation:** Installs easily in either insulated or non-insulated, new-construction applications. Standard Slope fixtures accommodate ceilings with 2/12 to 6/12 pitch (9° to 27°). Super-Slope fixtures are designed for 7/12 to 12/12 pitch (30° to 45°). The housings are supplied with the Juno Real Nail® 3 bar hanger system, which includes captive bugle-headed nails to secure the fixture in wood joist construction or integral T-bar clips for suspended ceiling installation.
- E. High-efficiency optics:** A computer-optimized reflector combined with a high-transmission diffusing lens conceals the LEDs and produces uniform aperture luminance. The PAR38 size reflector developed specifically for the slope LED provides optimum performance and obscures view into the housing through all pitch ranges.
- F. Adjustable Slider Plate:** The adjustable slider plate allows the LEDs and reflector to be positioned perpendicular to the floor through the entire pitch range and includes 1/4" adjustment indicators for consistent fixture-to-fixture alignment.
- G. Dimmable LED driver:** Specify either dedicated 120-volt driver with forward and reverse phase dimming or universal voltage driver (120-277V) with 0-10V dimming.

6" IC-Rated 900 and 1400 Lumen Slope Ceiling LED Downlights

6" new construction housings for use in standard slope applications with 2/12 to 6/12 pitch (9° to 27°).

6" Slope New Construction

Dedicated 6" Slope Ceiling LED new construction housing with integral light engine and choice of dimmable drivers: 17.4W nominal dedicated 120-volt driver with forward phase and ELV dimming. Air-Loc fully sealed housing does not require separate gasket. IC housing designed for use in IC or non-IC construction.

16 $\frac{1}{8}$ " L x 9 $\frac{1}{8}$ " W x 7 $\frac{3}{8}$ " H
Ceiling cutout: 7 $\frac{1}{32}$ " x 6 $\frac{1}{16}$ "

Example: IC926LED G4 09LM 27K 90CRI 120 FRPC

Housing and trim can be ordered together or separately, but will always ship separately.

An economical solution
offering warm, natural light

Slope Ceiling Incandescent Downlights

Patented, Juno incandescent downlight housings for sloped ceiling applications cover the full pitch range from 2/12 for standard slopes up to 12/12 for super slopes. The housings are available in new construction or remodel versions for both insulated and non-insulated ceilings. The lamp socket is adjustable, enabling the light beam to be kept perpendicular to the floor. Downlight, adjustable, and lensed trims are available with a wide variety of baffles and reflector cones.

Economical incandescent lamps produce warm, natural illumination. Housings that accept a broad selection of lamp types and wattages are available, assuring that you'll have just the right amount of light for your interior space.

Juno Slope Ceiling Incandescent Downlight Advantages

- Covers standard and super slope applications ranging from pitch of 2/12 to 12/12
- Adjustable socket enables light beam to be aimed perpendicular to the floor
- Angle-cut baffle assures that grooves remain parallel to the floor for proper optic performance
- Oblique angle of shovel-cut housing holds the trim flush with the ceiling

6" Incandescent Sloped Ceiling Downlights

Patented Juno Slope Ceiling Downlights direct light straight down, providing proper light distribution from a sloped surface.

6" Standard Slope Housings – 2/12 to 6/12 Pitch (9° to 27°)

AIR-LOC

Energy efficient and
virtually maintenance-free

LED Step Lights . . .

the all around performers

Juno LED Step Lights are an energy efficient, virtually maintenance-free solution for indoor and outdoor, low-level lighting. They produce high-quality light with minimal power consumption, are rated to last a remarkable 50,000 hours, and are backed by a limited 5-year warranty. LEDs contain no toxic lead or mercury and produce no harmful ultraviolet or infrared wavelengths, making them the ideal eco-friendly solution.

Up to 85% more energy
efficient than incandescent;
50,000-hour rated service life

Mini LED Step Lights

Low-level lighting ... high style

For such a small fixture, Juno Mini LED Step Lights make a major statement. These architectural grade fixtures are about the size of a standard switch plate. With an approximate aperture size of one-inch square, they offer a unique, high-style appearance that blends seamlessly into its environment. An array of beautiful finishes completes the package. With their trendsetting design, extraordinary energy efficiency and long service life, Juno Mini LED Step Lights represent the new standard in upscale low-level lighting.

The supremely versatile step light

This little light goes a long way. The unique, compact, modular construction of the Mini LED Step Light provides solutions for a diverse number of applications. The IC-Rated, all-in-one design includes the 3-watt LED light engine, 120-volt dimmable driver, optic, and decorative face plate that all mount directly to a standard 2" x 4" junction box. Choose from four distinct optic designs and a selection of high-quality finishes.

Delivering modular flexibility for vertical and horizontal installations

Juno Mini LED Step Lights can be mounted in the wall either vertically or horizontally (shipped from the factory in the vertical position). Fixture orientation can be easily changed by simply removing the optic, rotating the mounting plate and re-installing in the horizontal orientation. The face plate easily attaches to the back plate with a single set screw. Juno Mini LED Step Lights provide unsurpassed flexibility for virtually any installation.

Shown in actual size

Vertical Orientation

Cutoff -
Horizontal Orientation

Optic Options

Adaptable to your specific needs

Four striking optic designs satisfy a variety of illumination and aesthetic requirements. Each optic creates a one-of-a-kind lighting effect, ranging from a subtle pool of accent lighting to a wide distribution ideally suited for steps and pathways. Juno Mini LED Step Lights are adaptable to a wide variety of low-level lighting applications.

Marker

The opal lens produces an attractive glow ideal for marking corridors or pathways.

Hood

Casts a pleasant pool of light at floor level while eliminating glare - ideal for theatre or auditorium lighting.

Cutoff

Balances low glare with a wide light pattern for steps and pathway lighting.

Louver

Integral louver provides superior shielding, making it an excellent choice for step lighting and other low level applications.

Outdoor/Wet Location Mini LED Step Lights

IP65

Specially designed to resist the elements

Constructed of high-quality, die-cast aluminum, the LMS (WL) Series of Outdoor/Wet Location Mini IC-Rated LED Step Lights provides long lasting performance in virtually any wet location. Designed to mount directly in standard 2"x4" (2-1/8" minimum depth) or 4"x4" (1-1/2" minimum depth) junction boxes.

Cutaway View

- A. Gasket** protects the junction box from intrusion of water and contaminants.
- B. Light Engine Driver** features a diffused lens (not shown) that protects the LED against water infiltration. Accepts 120V input and is dimmable with reverse phase electronic low-voltage dimmers.
- C. O-rings** prevent water seepage around the screws.
- D. Drain Slot** guides water away from the fixture without compromising aesthetics.
- E. Decorative Faceplate with Corrosion-Resistant Finish** preserves the appearance for years of use. Field adjustable in horizontal or vertical orientation.
- F. Four optic choices are available.**

Finishes

Juno IC-Rated Mini LED Step Lights are available for both indoor and outdoor applications. High-quality indoor finishes include plated bronze and satin nickel; outdoor/wet location units are finished with corrosion-resistant textured bronze or silver for superior durability. All fixtures are also available in white or black.

Step-up to Juno Performance LED Step Lights

IP65

The outdoor-rated Juno Performance LED Step Lights are the perfect combination of aesthetic fixture design and optimum illumination performance. These architectural-grade fixtures feature sleek, low-profile trims, attractively finished in corrosion-resistant, textured paint. Trims and matching hardware are available in black, white, silver, and bronze.

Features

- Unique all-in-one power module mounts directly to the cast aluminum trim and includes the LED light engine and 120-volt, non-dimming driver.
- Low-profile trim and baffle-steps produce wide illumination patterns and minimize glare.
- 3000K or 4000K color temperature available
- Fixture produces up to 300 lumens with nominal 13-watt power consumption.
- May be used as a retrofit for existing Juno PL115 outdoor-rated step light installations.

Indoor and Outdoor Rated LED Step Lights

Juno LED step lights provide an energy-efficient solution for low-level lighting in indoor or outdoor applications. Consuming just 6-watts of power, these LED step lights use far less energy than the comparable incandescent and fluorescent versions and are compatible with standard trims.

Indoor-Rated LED Step/Night Light

The indoor LED Step/Night Light is rated for use in wall- or ceiling-mount, indoor drywall applications. Two trims are available: one featuring a diffuse-glass lens for even light distribution; the other with louvers that reduce glare and provide a softer lighting effect.

- Dedicated LED housing ships complete with LED light engine and 120-volt, non-dimming driver
- Recessed housing is IC-Rated and can be completely covered with insulation
- Real Nail® 3 bar hanger system provides quick and easy installation
- 3000K or 4000K color temperature available

Ordering Information

Housing and trim can be ordered together or separate, but will always ship separate.

Example: IC113LED 30K 120

Example (Trim): 840 WH

Example (Together): IC113LED 30K 120 840 WH

			840 Angled Louvers Step Light Trim 	

Dimensions:

Wall Cutout: 8 3/4" x 3 3/4"

Trim Size: 9 9/16" L x 4 7/8" H

Outdoor Rated LED Step Light

The Outdoor LED Step Light is rated for use in outdoor and indoor wall-mount applications, including concrete pour, brick masonry, or drywall. Trims are cast aluminum and are offered in opal lens, grill and louver designs.

- Die-cast aluminum housing is IC rated and gasketed for wet locations
- Back housing ships separately from power module for rough-in purposes
- Power module assembly with LED light engine and 120-volt, non-dimming driver is mounted directly to metal tray for ease of installation into housing
- 3000K or 4000K color temperature available

Ordering Information

Order housing, and power module and trim separately.

Incandescent Step Lights

Juno incandescent step lights are a cost-effective option for low-level, indoor lighting applications. With two trims available — one featuring a diffuse lens for even light distribution and another with louvers to provide a softer effect with reduced glare — these step lights suit a variety of needs. These fixtures can be used in either insulated or non-insulated areas and incorporate the Real Nail® 3 bar hanger system for fast, easy installation.

Night Lights/Step Lights

The Indoor Incandescent Step/Night Light is rated for use in indoor wall- or ceiling-mount drywall applications. Trim offering includes diffuse glass lens and louver designs.

- Provided with medium base porcelain socket
- Recessed housing is IC rated and can be completely covered with insulation
- Rated for 25W A19 lamp in insulated IC applications, or 40W A19 lamp in Non-IC applications
- Real Nail® 3 Bar Hangers for quick housing placement

Ordering Information

Linear & Undercabinet LED

Juno LED linear and undercabinet luminaires are setting new standards for performance, efficiency and application versatility.

The Juno FlexConnect™ is a versatile, architectural linear lighting system that allows you to cut LED strips in sections as small as 6", and reconnect them in the field. These luminaires can be shaped around curved surfaces or mounted with linear channels, and provide exceptional performance and quality of light. Systems are fully customizable to meet the needs of virtually any residential space.

Juno® Solo-Task™ LED luminaires offer the ultimate in flexibility and efficiency. Their small size allows them to be used easily and unobtrusively in myriad applications including cabinetry, shelving, bookcases, and wall niches. The LEDs approximate the light levels of 25-watt halogen and xenon while consuming less than 1/5 of the energy and generating significantly less heat. The luminaires can be connected using the daisy-chain method, making installation simple. A convenient all-in-one recessed mount kit is also available.

Juno® Pro-Series LED and Pro-Series SoftTask™ LED fixtures provide quality, energy-efficient undercabinet lighting with an easy to conceal 1" profile. They feature integral drivers, fast and easy installation, warm 3000K CCT with identical wiring, control and finish options. Traditional Pro-Series LED fixtures mimic the light levels and color of halogen, while Pro-Series SoftTask features illumination more comparable to fluorescent. These fixtures are also available with Passive Infrared (PIR) Occupancy Sensor, field set for 30 seconds to 30 minutes.

SL Series – Juno FlexConnect™
Indoor Luminaires Damp Location Rated

SLW Series – Juno FlexConnect™
Indoor/Outdoor Luminaires IP67 Rated for Wet Locations

Juno FlexConnect™ Architectural Linear Lighting System

Flexible LED lighting that can be shaped and reconnected in the field

Juno FlexConnect™ is the industry's most versatile LED linear lighting system. Shape it around curved surfaces, cut it in the field, reconnect individual segments ... no other linear lighting product gives you so many installation options.

The Juno FlexConnect™ system includes indoor damp-location luminaires and indoor/outdoor IP67-rated luminaires. They offer a host of connector accessories that provide unsurpassed application versatility. The flexible luminaire comes in 20-foot spools that can be field-cut and customized in 6-inch increments, reconnected using the integral connectors, then attached in a variety of configurations including linear channels and curved surfaces.

Superior Performance and Quality of Light

Juno FlexConnect™ LED luminaires offer superb lighting performance, producing up to 450 lumens per foot of brilliant white light in CCTs of 2200K, 2700K, 3000K, 3500K, and 4000K. This UV-stable pigment maintains color throughout the life of the product and corrects color shift that regularly occurs with other encapsulated strips. Linear runs from 1-foot to 40-feet in length are possible with no voltage drop, ensuring even illumination throughout.

Onboard Current Regulation – Consistent light output is maintained across the length of the run utilizing current regulators every 6-inches; unlike traditional LED tape that uses resistors which results in voltage drop and light degradation.

Brilliant LED Performance – Available with 12 LEDs per foot or 24 LEDs per foot, for supremely uniform linear illumination.

Embedded Connectors – Patent pending, embedded connectors allow Juno FlexConnect to be field-cut in 6-inch increments and reconnected in the field to another strip, electrical feed or connector.

Durable Silicone Encapsulation – UV stable silicon protects the luminaire, providing extended reliability and long life.

Up to
95 CRI

Proprietary Optical Pigment – Patent pending optical pigment corrects color shift that results from LED encapsulation. Color point is spot-on as the pigment provides industry leading color rendering and color consistency.

nLIGHT

24VDC power supply – ELV/forward phase and 0-10V dimming; Compatible with nLight® nPP16d. Lutron driver options available.

Juno FlexConnect™

Easy to configure ... easy to install

Supplied in 20-foot spools, Juno FlexConnect™ is the only encapsulated flexible linear luminaire on the market that features unique, integral connectors. Each connector is spaced 6-inches apart, enabling the luminaires to be cut to any length and reconnected in the field. This helps eliminate waste and makes it easy to configure. Linear runs from 1-foot to 40-feet in length are possible with no voltage drop, ensuring even illumination throughout.

Installation couldn't be easier. Simply ... Flex it, Cut it, Reconnect it!

SL/SLW Series Cutting Tool – Make quick, fool-proof cuts through the center of embedded connectors placed every 6-inches along the strip.

Luminaire strips must be cut using the custom cutting tool (ordered separately).

Electrical Feeds

A variety of cables and modular connectors are available to customize each SL and SLW Series installation.

Starter Cables
CL2 rated for in-wall use.

Joiner Cables
Provides a flexible connection for two luminaire strips.

3-Way Connector
Provides a flexible connection for three luminaire strips.

Modular Connectors

End-to-End Connector – SLW Series connector seals two cut luminaire strips.

End Cap – Seals cut end of luminaire strip.

IP67 Rated Connectors (SLW Series)

A translucent silicone gel is included inside SLW Series clear acrylic enclosures that repels moisture – without inhibiting the light. These easy to install connectors allow the IP67 rating to be maintained when Juno FlexConnect™ strips are cut in the field.

4-Way Connector – Accepts four luminaire strips or three strips and one power feed. Available in SL Series for indoor use or SLW Series for outdoor wet locations.

Terminal Block – Accepts 14-22 AWG wire, allowing power supply to be remotely mounted up to 100 feet away.

Mounting Options

Aluminum Channel and Lens Options

Channels are available in satin aluminum, white or black finishes. They can be ordered with clear or frosted lens, or be specified without a lens.

Low Profile Surface Mount

Deep Surface Mount

45° Low Profile

Mounting Clips – Provide secure attachment to a variety of surfaces when placed at 1-foot intervals. The back of luminaires features 3M adhesive strips to maintain positioning while installing clips.

45° Square

45° Round

Note: Except as indicated, all optional accessories are ordered separately.

Undercabinet Solo-Task™ LED Lighting

Ultra-compact, super-efficient luminaires for task and accent lighting

Juno Solo-Task LED luminaires are the mighty-mite of undercabinet lighting. At less than 3" in diameter and a low 9/16" profile, they fit unobtrusively under cabinets and shelves, yet can produce over 280 lumens of brilliant white light for task and accent illumination. At just 3.8-watts, they consume less than one-fifth the energy of equivalent halogen or xenon light sources and generate significantly less heat.

Kitchen counters, work surfaces, retail displays ... all are ideal applications for this unique little light. Solo-Task LED luminaires feature quick and easy surface or recessed mounting and create high-quality, even, color-consistent illumination, with light levels comparable to 25-watt halogen or xenon. Solo-Task LED produces a wide, even light pattern with a color temperature of 3000K and CRI of 85. The luminaires are fully dimmable using factory qualified dimmers. They can be installed wherever light is needed and easily connected in daisy-chain fashion to provide uniform illumination.

It's almost a shame to hide these attractive little lights. Solo-Task LED luminaires are stylish and contemporary, and the die-cast aluminum housings are available in four beautiful finishes ... designer white, satin nickel, brushed bronze and black. They are the perfect enhancement to a wide variety of residential and commercial decors.

The LED Advantage

Juno® Solo-Task™ LED luminaires are more than space savers; they're energy savers, too. At just 3.8-watts, they consume less than one-fifth the energy of equivalent halogen or xenon light sources and generate significantly less heat. With no IR emissions in the beam, LEDs are far cooler in operation, and with no UV rays, they are ideal for fade-free illumination of light-sensitive materials. An exceptionally long service life of 50,000 hours assures many years of maintenance-free use.

Remarkably small and thin,
Juno Solo-Task LED luminaires
can produce over 280 lumens

2-1/2" x 9/16"

Convenient Kits

Kits include three surface mount luminaires, plug-in driver/transformer, switch, wire and clips.

Juno® Pro-Series Undercabinet Lighting

LED Undercabinet Linear Solutions for Residential Use

High-quality design and performance, along with fast, trouble-free installation are the essence of our Pro-Series flagship modular system. Pro-Series LED models provide cool-to-touch, energy efficient operation, making them ideal for residential settings. The Pro-Series LED produces high quality illumination with unprecedented energy savings and a 50,000 hour service life. They are now available with an optional occupancy sensor.

All Pro-Series fixtures maintain a slim 1" extruded aluminum profile available in a variety of lengths and four designer finishes to complement any décor. The extrusion is optimally designed to dissipate heat, to both maximize life and minimize the cabinet contact temperature. A reverse-angled tempered glass prism lens* hinges down for relamping and cleaning to provide the optimum mix of safety, simple maintenance, high light transmission and glare control. All these features and more are integrated into an attractive package that will provide years of high-quality, problem-free task lighting.

*Except SoftTask™ models which utilize a polycarbonate diffuser.

Installation

Pro-Series fixtures install in less than five minutes owing to their unique rear-wire access door and captive mounting screws that allow installation without having to open up the wireway or remove the lens. These fixtures include an integral driver that allows direct connection to 120-volt supply wires. Additional fixtures in a run simply plug into the first. The Pro-Series installation innovations turn one of the contractor's least favorite fixtures to install into a pleasure.

Pro-Series 5-Minute Direct-Wire Installation

Step 1 Attach supply wires to rear access cover.

Step 2 Connect supply wires to fixture leads using push-in connectors.

Step 3 Mount fixture to cabinet bottom using captive mounting screws

Pro-Series LED vs. Pro-Series SoftTask™ LED

Pro-Series LED and Pro-Series SoftTask LED fixtures both provide quality, energy-efficient undercabinet lighting with an easy to conceal 1" profile. They also feature integral drivers, fast and easy installation, warm 3000K CCT with identical wiring, control and finish options. Traditional Pro-Series LED fixtures mimic the light levels and color of halogen, producing multiple points of light on the working plane. For those that prefer more uniform illumination, Pro-Series SoftTask fixtures produce an effect more comparable to fluorescent, free of multiple hot spots and shadows.

Pro-Series SoftTask LED

Pro-Series Fluorescent

Juno® Pro-Series SoftTask™ LED

Juno Pro-Series SoftTask LED duplicates the light level of Fluorescent undercabinet lighting while consuming up to 45% of the energy. And by virtue of its amazing 50,000 hour life, lamp replacement is a thing of the past...at 4 hours/day you can expect over 34 years of maintenance-free operation!

Accessories

JC3 8IN, JC3 17IN, JC3 26IN – Jumper Cords

3-wire Jumper Cord to electrically join fixtures when spaced apart, turning corners, or spanning cabinet frames.

Finish: BL-Black, WH-Designer White

U6CP – 6' Cord and Plug

3-wire grounded cord and plug accessory for portable plug-in installation.

Finish: BL-Black, WH-Designer White

UDWMOC – Occupancy Sensor Module

Direct wire Passive Infrared (PIR) Occupancy Sensor without on/off rocker switch. 6"L 4-1/2"D x 1"H

Finish: BL-Black, WH-Designer White

UDWMOC (WH, BL) RS – Occupancy Sensor Module

Direct wire Passive Infrared (PIR) Occupancy Sensor with on/off rocker switch. 6"L 4-1/2"D x 1"H

Finish: BL-Black, WH-Designer White

UDWM – Direct Wire Module

Facilitates code-compliant installation of fixture at front edge of cabinet. Includes wiring enclosure and 36" field-shortenable jumper cord that plugs into the right or left side of the fixture. 3"L x 3"D x 1"H

Finish: BL-Black, WH-Designer White

UCONN – 3/8" Miniature Die-Cast Electrical Connector

Accessory for use when loop wiring with non-metallic sheathed cable or BX.

Performance Features

- Utilizes warm-white 3000K LEDs tightly binned to within a 3-step MacAdam Ellipse for industry-leading color consistency, 90CRI minimum
- Approximates the color temperature and illumination levels of Fluorescent using up to 45% less energy
- 22", 30" and 40" fixtures are available with Passive Infrared (PIR) Occupancy Sensor. The PIR sensor can be field adjustable time delay that can be set from 30 seconds to 30 minutes. All additional fixtures connected to the fixture with occupancy sensor will be controlled by the single sensor
- Dimmable with the use of most forward and reverse phase dimmer – see specification sheet.
- No UV or forward projected heat

Construction Features

- Slim 1" extruded aluminum profile
- Polycarbonate diffusing lens provides uniform illumination without hotspots
- Integral state of the art 120-volt constant current electronic driver
- Integral on/off rocker switch standard, available without switch as well
- Choice of Designer White, Brushed Silver, Brushed Bronze or Black finish

Installation Features

- Modular design for maximum flexibility and quick installation allows up to 40 fixtures to plug together using the supplied internal straight connector or optional jumper cords
- Captive external mounting screws
- Rear wireway access cover with flush non-metallic cable clamp and push-in electrical connectors facilitate fast wiring without having to open fixture (14", 22", 30" and 40" only)
- Miniature die-cast fitting for flexible metal conduit, off-center knock-outs and extra mounting plate for feed-through fixture-to-fixture loop wiring increase installation versatility (14", 22", 30" and 40" only)
